# 1、概述 Overview

ARD2M 电动机保护器（以下简称保护器）适用于额定电压至 380V 的低压电动机回路，集保护、测量、控制、通讯、运维于一体。其完善的保护功能确保电动机安全运行，带有逻辑可编程功能，可以满足多种控制方式。The ARD2M motor protector (hereinafter referred to as the protector) is suitable for low-voltage motor circuits with rated voltage up to 380V and integrates protection, measurement, control, communication, operation and maintenance. Its perfect protection function ensures the safe operation of the motor, with logic programmable function, can meet a variety of control methods.

该产品有一体式和分体式两种结构选择，由主体、互感器组成，可适应各种柜体的安装。

The product adopts split structure, which is composed of main body, panel, mutual inductor and optional communication module, and can adapt to the installation of various cabinets.

产品执行标准 Product Implementation standards:

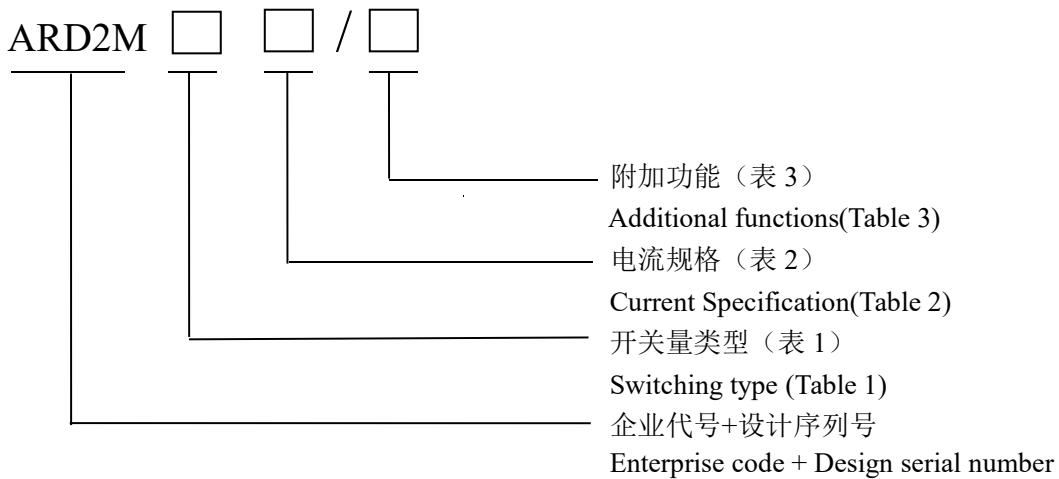

- GB/T14048.4-2020 低压开关设备和控制设备第 4-1 部分：接触器和电动机起动器机电式接触器和电动机起动器(含电动机保护器);
- GB/T14048.4-2020 Low-voltage switchgear and control gear -- Part 4-1: Contactors and motor starters -- Electromechanical contactors and motor starters (including motor protectors);
- JBT 10736-2007 低压电动机保护器。
- JB/T 10736-2007 Low voltage motor protector.

# 2、产品特点 Product Features

- 支持电力参数测量 (U、I、P、Q、S、PF、F、EP、EQ)，电流及电流不平衡度、电流正序、负序、零序分量、电压、三相电压相角、剩余电流。
- Support power parameter measurement (U, I, P, Q, S, PF, F, EP, EQ), voltage and current imbalance degree, voltage and current positive sequence, negative sequence, zero sequence component, three-phase voltage phase Angle, residual current.
- 保护功能包括过载反时限、过载定时限、接地、起动超时、漏电、欠载、断相、堵转、阻塞、短路、溢出、不平衡(电流、电压)、过功率、欠功率、过压、欠压、相序、温度、tE 时间、外部故障、起动次数限制、运行时间报警、故障次数报警。
- Protection functions include overload inverse time, overload definite time, grounding, starting timeout, leakage, underload, locked-rotor, obstruction, short circuit, phase, overflow, imbalance (current, voltage, power, less power, over voltage, under voltage, phase sequence, temperature, external fault, tE time, running time alarm, fault alarm).
- 8 路可编程 DI 输入，默认采用内置 DC24V 电源，也可选择外部有源湿接点。
- 8 channels programmable DI input, the default use of DC24V power supply, or external active wet contact can be selected (see the selection table).
- 5 路可编程 DO 输出，满足直接起动，星—三角起动，自耦变压器起动，等多种起动方式，可通过通讯总线实现主站对电动机的遥控“起/停”。
- 5 programmable DO output, to meet the direct starting, star - triangle starting, auto-transformer starting, and other starting modes, can be through the communication bus to achieve the master station to the motor remote control "start/stop".
- 可选抗晃电功能：支持晃电立即再启动、失压重起动。
- Optional anti-shaking function: support immediate restart of shaking power and restart of voltage loss.
- 标配 MODBUS\_RTU 通讯，可选配 PROFIBUS DP 通讯，支持最多 2 路通讯接口。
- MODBUS\_RTU and PROFIBUS DPV1 communication modules are available for selection. 2 MODBUS\_RTU communication channels or MODBUS\_RTU+PROFIBUS DPV1 communication modules can be chosen.

- 可选配 1 路 4-20mA 模拟量输出接口，与 DCS 系统相接，可实现对现场设备的监控。
- Optional 1 channels DC4-20MA analog output interface, connected with DCS system, can realize the monitoring of field equipment.
- 具有故障记录、起动记录、停车记录、DI 变位记录和再起动记录等各类事件记录。
- With fault record, start record, stop record, DI displacement record, restart record and other records of various events, you can view a number of motor operation and maintenance information.
- 显示界面液晶显示，支持中/英文切换。
- The display interface supports Chinese/English LIQUID crystal display

### 3、型号说明 Model Description

ARD2M 标配开关量数量为 8DI、5DO，开关量类型见表 1：

The standard switch quantity of ARD2M is 8DI and 5DO, and the switch quantity type is shown in Table 1:

表 1 Table 1

主体开关量分类 Main switch classification	代号 Code
DI 为干结点，DO 外部电源为 AC220V DI is the dry contact, and the external power supply of DO is AC220V	K1
DI 为湿结点，DC110V 输入，DO 外部电源为 AC220V DI is the wet contact, the input is DC110V, and the external power supply of DO is AC220V	K2
DI 为湿结点，DC220V 输入，DO 外部电源为 AC220V DI is the wet contact, the input is DC220V, and the external power supply of DO is AC220V	K3
DI 为湿结点，AC220V 输入，DO 外部电源为 AC220V DI is the wet contact, AC220V input, and DO external power supply is AC220V	K4

ARD2M 电流规格与适用电机额定电流、功率对应关系见表 2:

The corresponding relation between ARD2M current specification and the rated current and power of the applicable motor is shown in Table 2:

表 2 Table 2

保护器电流规格 Protector current specification (A)	变比设置 Ratio setting	互感器一次侧圈数 Primary side coil number of transformer	适用电机范围 Applicable scope of motor(kW)	适用电机额定电流范围 Suitable for motor Rated current range(A)
1	支持 Support	1 圈 1cirlce	0.12-999	0.1-5000
5		1 圈 1cirlce	0.12-999	0.5-5000
25	不支持 Does not support	1 圈 1cirlce	3-11	6.3-25
100		1 圈 1cirlce	15-45	25-100
250		1 圈 1cirlce	55-132	63-250
800		1 圈 1cirlce	160-250	250-800

ARD2M 附加功能见表 3:

Additional function of ARD2M are shown in Table 3:

表 3 Table 3

附加功能 Additional function		代号 code	附加功能 Additional function		代号 code
电能 Energy metering		Ep	事件记录 SOE Event record		SR
4-20mA 变送输出 4-20mA analog output		M	温度保护 Temperature protection		T
单通讯 1channel communi cation	1 路 Modbus_RTU 通讯 Modbus-RTU	C	双通迅 2channel communic ation	2 路 Modbus_RTU 通讯 Modbus-RTU	2C
	1 路 PROFIBUS_DPV0 通讯 Profibus-DP	CP		1 路 Modbus_RTU+1 路 PROFIBUS_DPV0 Modbus-RTU+ Profibus-DP	CCP
抗晃电功能 Anti - electric shock function		SU	漏电保护 Leakage protection		L

备注 Remarks:

(1)额定电流在 0.4A-1.6A 范围的电动机可选择 1A 规格的电动机保护器，互感器穿芯 1 匝使用；电流范围在 1.6-6.3A 的电动机选择 5A 规格的保护器，穿芯 1 匝使用。

(1)The motor with rated current of 0.4-1.6A can choose the 1A specification motor protector, and the transformer is wound 1 times. The motor with rated current of 1.6-6.3A can choose the 5A specification motor protector, and the transformer is wound 1 time.

(2)100A 及以下电流规格的一体式保护器使用一体式电流互感器；

100A 及以下电流规格的分体式保护器使用分体式电流互感器；

250A、800A 电流规格使用另外一种分体式电流互感器。互感器外观尺寸详见“外形尺寸及安装”部分。

(2) Integrated current transformer is used for integrated protector with current specification of 100A and below;

The split current transformer is used for the current specification of 100A and below;

250A and 800A current specifications use another type of split current transformer. For the external dimensions of the

transformer, please refer to the "external dimensions and installation".

(3) 温度测量支持传感器类型为 PTC 或者 NTC 或者 PT100。

(3) The temperature measurement support sensor type is PTC or NTC or PT100.

(4) 选配漏电功能 (L) 后, 每台保护器自配一只漏电互感器, 漏电互感器尺寸详见“外形尺寸及安装”部分。漏电互感器标配  $2m \pm 10cm$  二次线, 如需其它长度可同厂家联系。

(4) After the leakage function (L) is selected, each protector is equipped with a leakage transformer. The dimensions of the leakage transformer are shown in the section "overall dimensions and installation". Leakage transformer is equipped with  $2m \pm 10cm$  secondary line as standard. If you need other length, please contact the manufacturer.

## 4、主要参数 Main parameters

### 4.1 技术指标 Technical indicators

ARD2M 技术指标见表 4:

ARD2M technical indicators are shown in Table 4:

表 4 Table 4

技术参数 Technical parameters	技术指标 Technical indicators	
保护器辅助电源 Protector auxiliary power supply		AC85-265V/DC100-350V
电机额定工作电压 Rated working voltage of the motor		AC220V / 380V, 50Hz / 60Hz
电动机额定工作电流 Rated operation current of the motor	1 (0.1A-1.6A) 5 (1.6A-6.3A) 25(6.3A-25A) 100(25A-100A) 250(63A-250A) 800(250A-800A)	一体式/分体式互感器 Integrated/Split current transformer 分体式互感器 Split current transformer
继电器输出触点容量 Relay output contact capacity	阻性负载 Impedance load	AC250V、10A
开关量输入 Switching input	8 路无源干结点 (可选配 有源 DC110V、DC220V、AC220V 输入) 8 channels of passive dry contact (active DC110V, DC220V, AC220V input can be optional)	
通讯 Communication	RS485 Modbus_RTU, Profibus_DP 协议 RS485 Modbus_RTU, Profibus_DP Protocol	
环境 Environment	工作温度 Working temperature	-10°C~55°C
	贮存温度 Storage temperature	-25°C~70°C
	相对湿度 Relative humidity	$\leq 95\%$ 不结露, 无腐蚀性气体 $\leq 95\%$ No condensation, no corrosive gas
	海拔	$\leq 2000m$

	Altitude	
污染等级 Pollution levels	3 级 3 level	
防护等级 Protection grade	IP65 (安装在柜体面板时) IP65(installed on the cabinet panel)	
安装类别 Installation category	III 级 III level	

## 4.2 功能配置 Functional configuration

ARD2M 功能配置见表 5:

ARD2M Functional configuration shown in Table 5:

表 5 Table 5

功能 Function	型式 Type	功能配置 Functional configuration	
		标配功能 Standard function	选配功能 Optional function
保护功能 Protection function	定时限过载 Fixed time overload	√	
	反时限过载 Inverse time overload	√	
	起动超时 Starting timeout	√	
	断相 Phase loss	√	
	电压不平衡 Voltage unbalance	√	
	电流不平衡 Current unbalance	√	
	堵转 Locked-Rotor	√	
	欠载 underload	√	
	外部故障 External fault	√	
	阻塞 Block	√	
	温度保护 (PTC/NTC) Temperature protection(PTC/NTC)		√
	剩余电流(二选一) Residual current(One only)	√

模拟量输出 Analog output	1 路 4-20mA 1 channel 4-20mA		√
事件记录 Event record	起动记录、停车记录、DI 变位记录、再起动记录、运行记录（支持通讯传输） Start record, stop record, DI displacement record, restart record, (support communication transmission)	√	

## 5、外形尺寸及安装 Overall dimensions and installation

### 5.1 产品组成 Composition

ARD2M 产品组成如图 1、图 2 所示：

The product composition of ARD2M is shown in Figure 1, Figure 2:

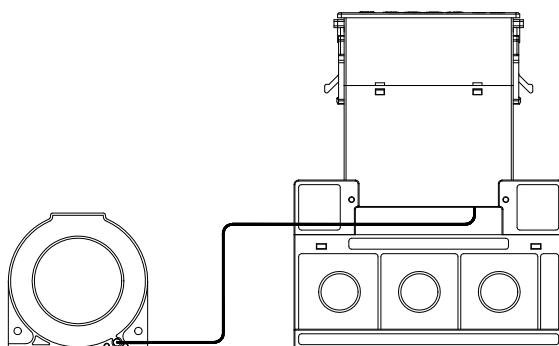

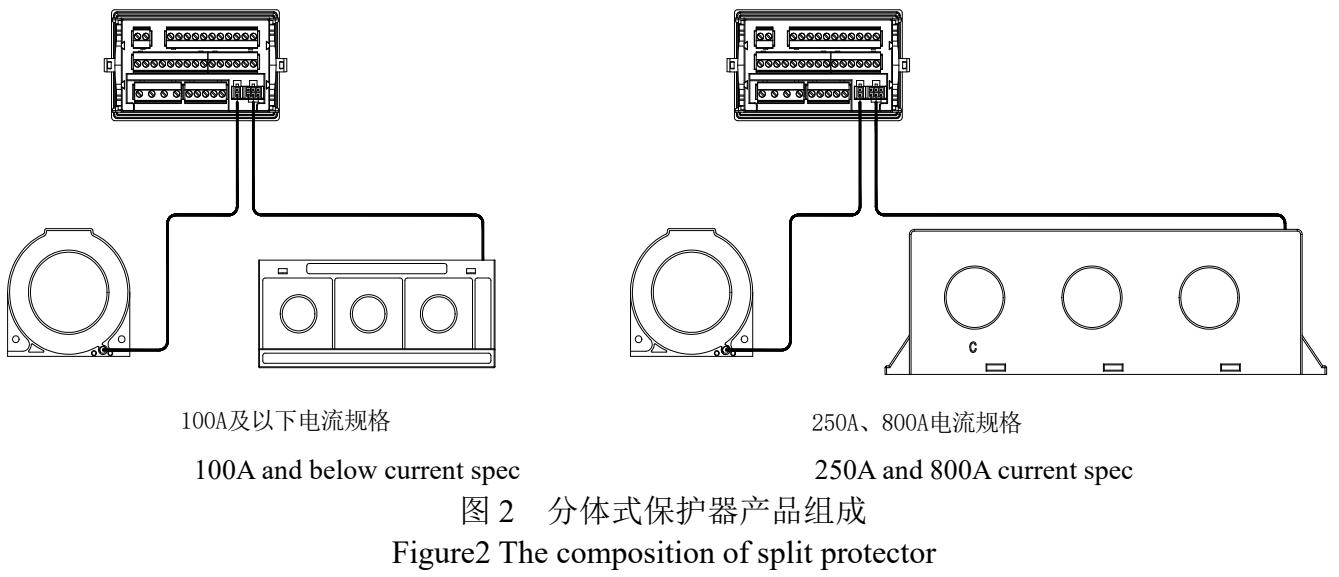

图 1 一体式保护器产品组成  
Figure1 The composition of integrated protector

## 5.2 外形与开孔尺寸 (单位: mm) Panel size and opening(Unit:mm)

外形与开孔尺寸如图3、4所示:

The shape and opening size are shown in Figure3,4:

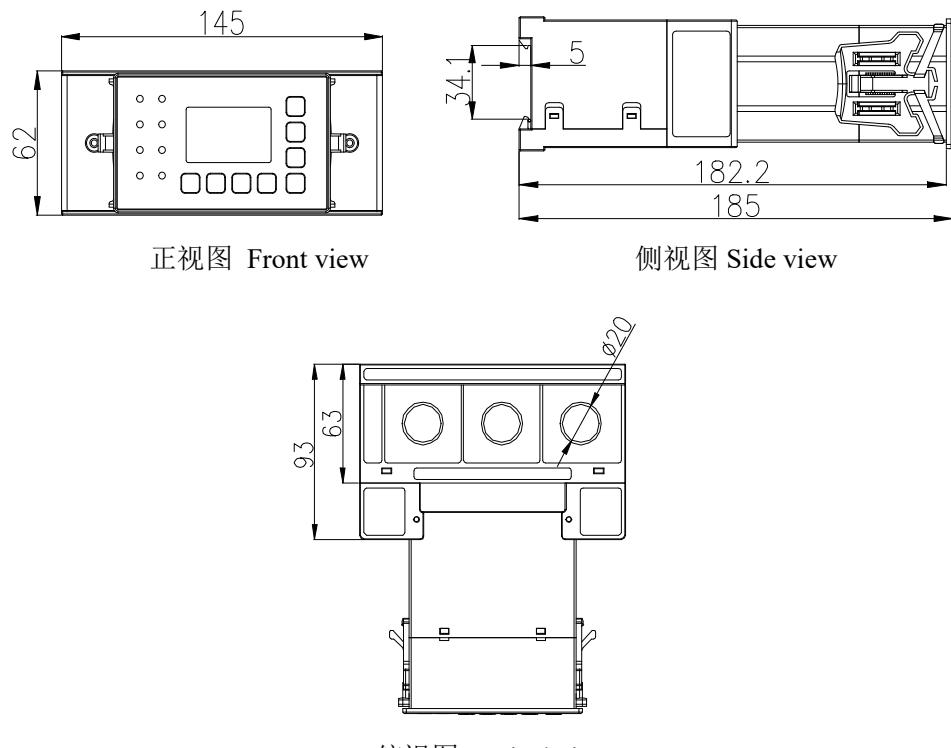

图3 ARD2M 一体式电动机保护器外形尺寸

Figure 3 Panel size of integrated protector ARD2M

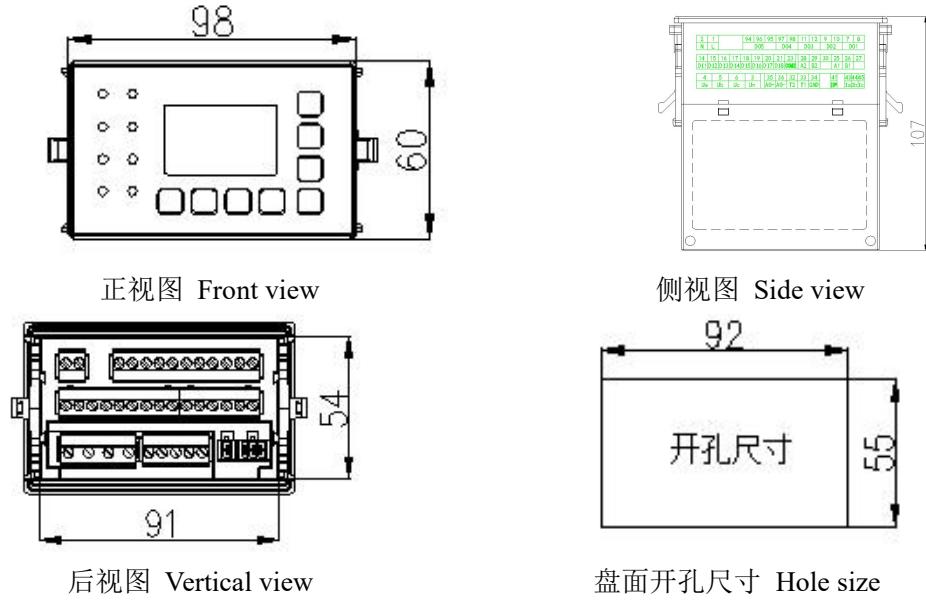

图 4 ARD2M 分体式电动机保护器外形与开孔尺寸

Figure 4 Panel size of split protector ARD2M

5.3 互感器安装尺寸 (单位: mm) Size of installation of current transformer(unit:mm)

5.3.1 一体式互感器/分体式互感器(100A 及以下电流规格用)外形尺寸如图 5 所示

(单位: mm) :

The external dimensions of Integrated/split current transformer(100A and below current specification)are shown in figure 5(Unit:mm):

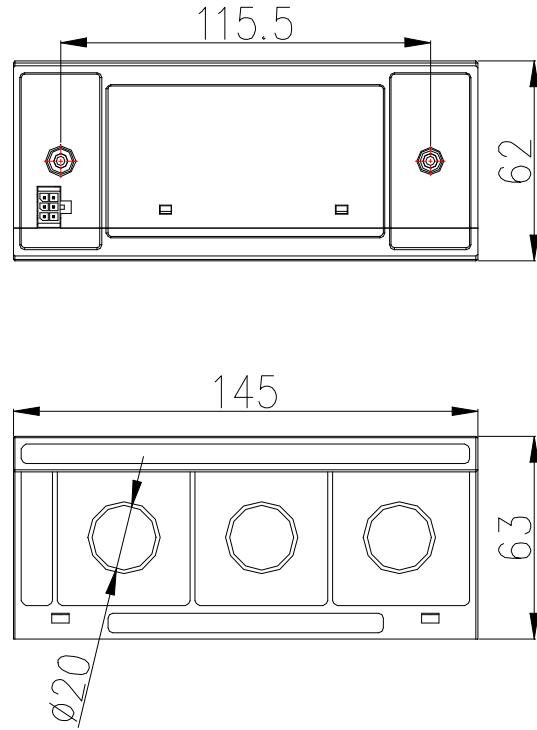

图 5 一体式互感器/分体式互感器(100A 及以下电流规格用)外形尺寸

Figure 5 The external dimensions of Integrated/split current transformer(100A and below current specification)

5.3.2 分体式互感器(250A、800A 电流规格)外形尺寸如图 6 所示 (单位: m) :

The external dimensions of split current transformer(250A and 800A current specification)are shown in figure

6(Unit:mm):

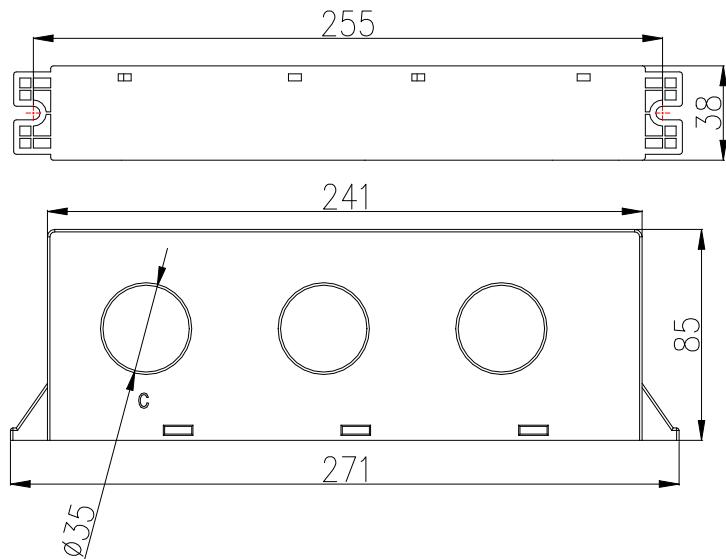

图 6 分体式互感器(250A、800A 电流规格用)外形尺寸

Figure 6 The external dimensions of split current transformer(250A and 800Acurrent specification)

5.3.3 漏电流互感器外形尺寸如图 7、表 6 所示 (单位: mm) :

The external dimensions of leakage current transformer are shown in figure 7 and table 6(Unit:mm):

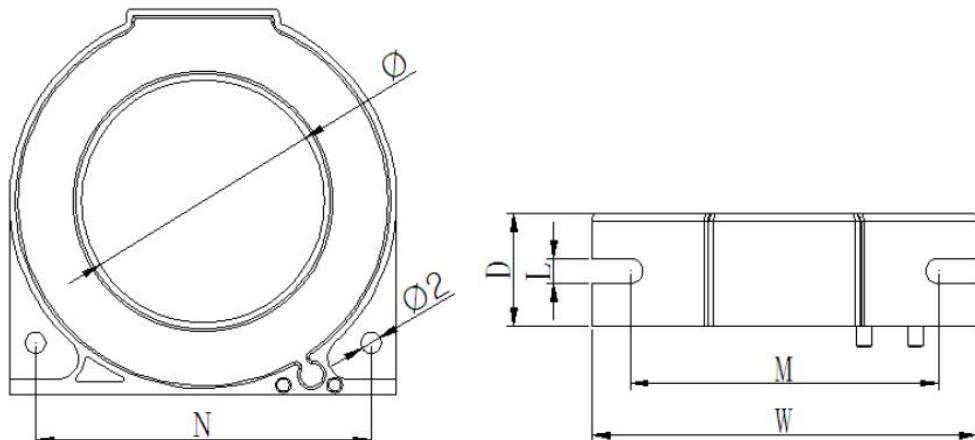

图 7 漏电流互感器外形尺寸

Figure 7 The external dimensions of leakage current transformer

漏电流互感器引出线为双芯屏蔽线，标配长度为  $2m \pm 10cm$ ，客户可根据需要定制。选配漏电(L)功能时，一台保护器配一只互感器。

The leakage transformer is equipped with a secondary wire of  $2m \pm 10cm$ . If other lengths are needed, please contact the manufacturer, one protector with one transformer.

图 9 CC 端子排列图

Figure 9 The wiring terminal arrangement of ARD2M CC

ARD2M 端子号与功能定义见表 7:

See Table 7 for the ARD2M terminal number and function definition:

表 7 Table 7

端子号 Terminals NO.	功能定义 Function definition	备注 Remark
1	电源输入 L (直流时为+) Power input L (+ at DC time)	辅助电源接入此两端子 The auxiliary power supply is connected to the two terminals
2	电源输入 N (直流时为-) Power input N (- at DC time)	
3	Un 输入 Un input	
4	Ua 相电压输入 Ua Phase voltage input	三相电压输入 Three-phase voltage input
5	Ub 相电压输入 Ub Phase voltage input	
6	Uc 相电压输入 Uc Phase voltage input	

7、8	DO1, 起动 1 输出 DO1,Start 1 output	
9、10	DO2, 起动 2 输出 DO2,Start 2 output	
11、12	DO3, 报警输出 DO3,Alarm output	
97、98	DO4, 脱扣输出, 常开点信号 DO4,Trip output, normally open point signal	
94、95、96	DO5, 带公共端的常开+常闭脱扣输出 DO5,Trip output, normally closed+normally open with common end	5 路可编程继电器输出 (DO) (功能定义为出厂默认设置, 用户可根据需要自行设置) 5-channel programmable relay output (DO)(The function is defined as factory default setting, which can be set by users according to their needs)
14	DI1, 停车信号输入 DI1,Stop signal input	
15	DI2, 起动 1 信号输入 DI2,Start 1 signal input	
16	DI3, 起动 2 信号输入 DI3,Start 2 signal input	
17	DI4, 紧急停车信号输入 DI4,Emergency stop signal input	
18	DI5, 复位信号输入 DI5,Reset signal input	
19	DI6, 控制权限 1 输入 DI6,Control permission 1 input	
20	DI7, 控制权限 2 输入 DI7,Control permission 2 input	
21	DI8, 外部故障输入 DI8,External fault signal input	
23	COM2, DI 输入公共端 COM2,DI Input common terminal	
35	模拟量输出 AO+ Analog output AO+	1 路 4-20mA 模拟量输出 1 channel 4-20mA analog output
36	模拟量输出公共端 AO- Analog output common end AO-	
25	A1	第一路 Modbus-RTU 通讯 First channel MODBUS communication
26	B1	
28	A2	第二路 Profibus-DP 通讯 Second channel MODBUS communication
29	B2	
32	T2 (PTC 输入 B) T1(PTC input A)	温度保护 (热敏电阻输入) Temperature protection (thermistor input)
33	T1 (PTC 输入 A) T2(PTC input B)	
34	GND	
41	IO*漏电流输入 IO*leakage current input	漏电流输入 Leakage current input
43	Ia 相电流输入 Ia Phase current input	
44	Ib 相电流输入 Ib Phase current input	
45	Ic 相电流输入 Ic Phase current input	

注: 第二路 Modbus-RTU 通讯时, 端子号 28 为 B2, 29 为 A2。

Note: When the second channel communication, the terminal 28 is B2, he terminal 28 is A2.

## 6、保护功能说明 Protection function description

各项保护默认作用阶段见表 8:

The default action stages of each protection are shown in Table 8:

表 8 Table 8

保护类型 Protection type	默认起作用时段 Default active period
-------------------------	----------------------------------

过压、欠压、电压不平衡、相序、外部故障、溢出保护、起动次数、故障次数、运行时间、PTC/NTC 温度保护 Overvoltage, undervoltage, voltage imbalance, phase sequence, external fault, overflow protection, starting times, fault times, running time, PTC/NTC temperature protection	全程 whole course
反时限过载、堵转、断相、漏电、接地、起动超时、短路、溢出保护、 过压、欠压、电压不平衡、相序、外部故障、起动次数、故障次数、运行时间、 PTC/NTC 温度保护、定时限过载 starting timeout, short circuit, overflow protection, Overvoltage, undervoltage, voltage imbalance, phase sequence, external fault, number of starts, number of faults, running time, PTC/NTC temperature protection, fixed time overload	起动中 When starting
反时限过载、阻塞、断相、电流不平衡、漏电、接地、定时限过载、欠载、短路、溢出保护、 过压、欠压、电压不平衡、相序、欠功率、过功率、外部故障、PTC/NTC 温度保护、 起动次数、故障次数、运行时间 Reverse time-limit overload, blocking, phase break, current imbalance, leakage, grounding, constant time-limit overload, underload, short circuit, overflow protection, overvoltage, undervoltage, voltage unbalance, phase sequence, underpower, overpower, external fault, PTC/NTC temperature protection, number of starts, number of faults, running time	运行中 In operation

## 6.1 反时限过载保护 Inverse time overload protection

当电动机在过负载情况下，长时间超过其额定电流运行时，会导致电动机过热，绝缘降低而烧毁，保护器根据电动机的发热特性，计算电动机的热容量，模拟电动机发热特性对电动机进行保护。

When the motor runs for a long time in excess of its rated current under excessive load, it will overheat the motor, reduce insulation and burn it out. The protector calculates the heat capacity of the motor according to its heating characteristics and simulates its heating characteristics to protect the motor.

反时限过载保护起动条件为三相电流最大值达到设定的过载起动定值，默认过载起动定值为 1.2 倍电动机额定电流。

The starting condition of reverse time-limit overload protection is that the maximum three-phase current reaches the set overload starting value, and the default overload starting value is 1.2 times the motor's rated current.

过载保护电流-时间对照表见表 9，过载特征曲线图（K 曲线图）见图 10 所示：

The current-time comparison table of overload protection is shown in Table 9, and the overload characteristic curve (K curve) is shown in Figure 9:

表 9 Table 9

可选择的脱扣曲线 等级 K Optional tripping curve grade K	1	2	3	5	10	15	20	25	30	35	40
脱扣延时 (S) 误 差 ±10% Tripping delay(S)tolerance ±10%	三相平衡的负载，自冷态始 Three - phase balanced load, starting from the cold state										
额定值 $I_e \times 1.2$	25	50	75	125	250	375	500	625	750	875	100

Rated value $I_e \times 1.2$										0	
$\times 1.5$	16	32	48	80	160	240	320	400	480	560	640
$\times 2$	9	18	27	45	90	135	180	225	270	315	360
$\times 3$	4	8	12	20	40	60	80	100	120	140	160
$\times 4$	2.26	4.52	6.78	11.3	22.5	33.8	45	56.3	67.5	78.8	90
$\times 5$	1.44	2.88	4.32	7.2	14.4	21.6	28.8	36	43.2	50.4	57.6
$\times 6$	1	2	3	5	10	15	20	25	30	35	40
$\times 7.2$	0.7	1.4	2.1	3.5	6.9	10.4	13.9	17.4	20.8	24.3	27.8

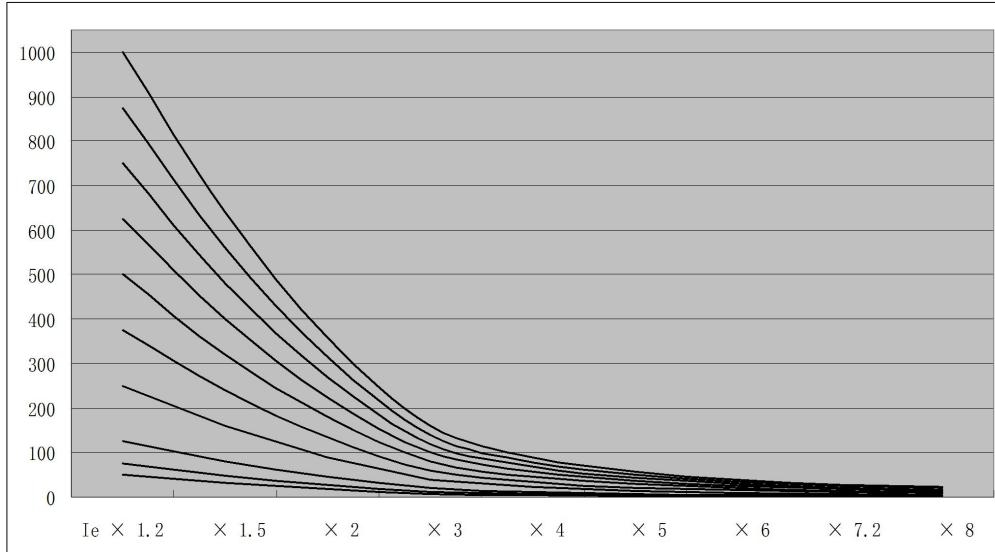

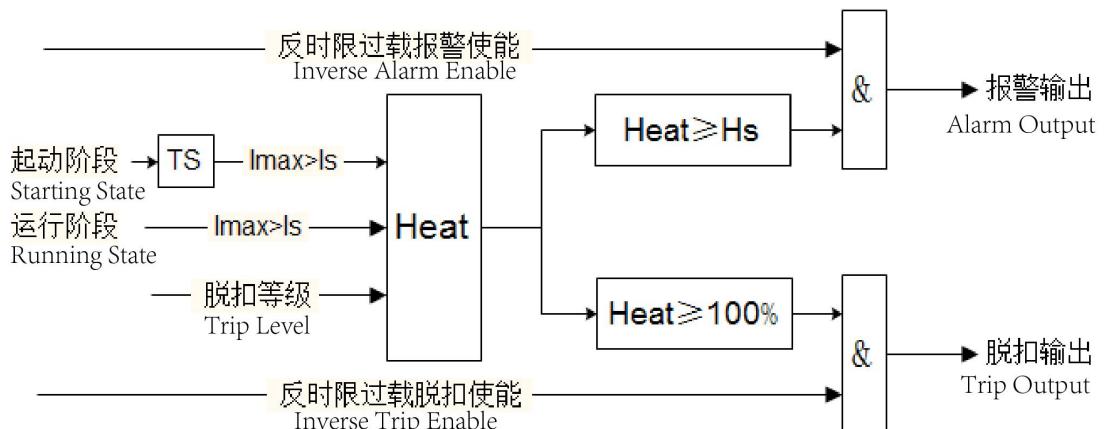

图 10 过载特征曲线图 (K 曲线图)

Figure 10 Characteristic curve of overload (K curve)

反时限过载保护可提高手动和自动两种复位方式选择。选择“自动”时，在电动机过载脱扣后，热容量降到15%以下自动复位，不需要再进行复位操作即可允许再次起动操作；选择“手动”时，在电动机过载脱扣后，热容量降到15%以下，需要人工手动复位，否则不允许再次起动操作。

Inverse time overload protection improves manual and automatic reset options. When "automatic" is selected, after the overload trip of the motor, the heat capacity will be automatically reset to less than 15%, and the restart operation can be allowed without the need for further reset operation; When "manual" is selected, after the motor overload trip, the heat capacity will be reduced to less than 15%. Manual manual reset is required, otherwise the restart operation is not allowed.

反时限过载保护逻辑框图 Logic block diagram of anti-time overload protection

注 Note:

$I_{max}$ : 三相电流最大值 Maximum three-phase current

$I_s$ : 过载起动定值 Overload starting fixed value

Heat: 热容量百分比 Percentage heat capacity

$H_s$ : 热容量报警值 Heat capacity alarm value

TS: 起动屏蔽时间 Starting shield time

$t_E$  时间保护  $t_E$  Time protection

对于增安型电动机，交流绕组在最高环境温度下达到额定运行稳定温度后，从开始通过堵转电流时记起，直至上升到极限温度所需的时间即为  $t_E$  时间。增安型电机的  $t_E$  时间通常由电机制造商提供，用户可以在电机铭牌上找到该数据。

For the increased safety type motor, after the ac winding reaches the rated operating stable temperature at the highest ambient temperature, the time required from the beginning of passing through the blocking current until it rises to the limit temperature is  $t_E$  time. The  $t_E$  time of the increased safety motor is usually provided by the motor manufacturer, and the user can find this data on the motor nameplate.

提供堵转时在  $t_E$  时间内断开电动机电源的热过载保护，仅在电动机起动完成后投入，带有独立的延时计时器。 $t_E$  保护特征曲线动作延时对照表见表 10，曲线图如图 11 所示：

It provides thermal overload protection of disconnecting the power supply of the motor within  $t_E$  time during lock-in. It is only put in after the motor is started, with an independent delay timer. The motion delay comparison of  $t_E$  protection characteristic curve is shown in Table 10, and the curve is shown in Figure 11:

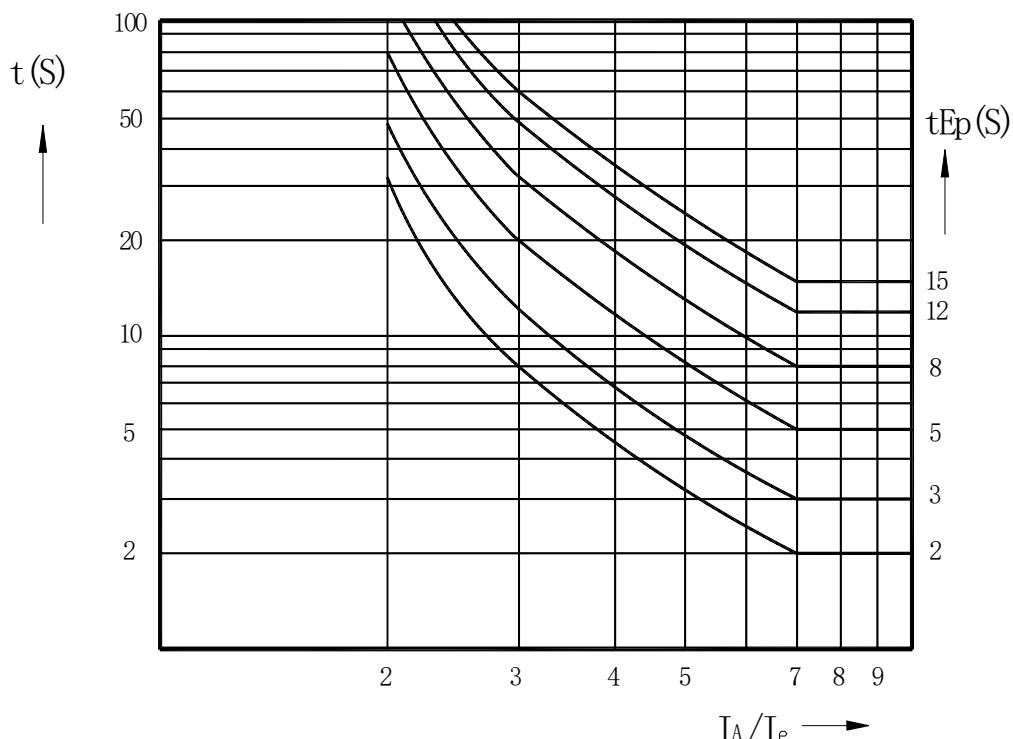

图 11  $t_E$  保护延时与堵转电流比  $IA/I_e$  的电流—时间特性曲线

Figure 11  $t_E$  Protection delay to blocking current ratio  $IA/I_e$  Current-time characteristic curve

说明 Instructions:

$t_{EP}$ : 7 倍额定电流时允许堵转时间； 7 times of the rated current allowed lock-in time;

$IA$ : 堵转电流； Locked-rotor current;

$I_e$ : 电动机额定电流。Rated current of the motor.

9.00	0.2	0.2	0.2	0.2	0.2	0.2	0.2	0.2	0.2

注 Note:

(1)、 $t_E$  保护的动作时间= $t_{Ep}$  为 2 (S) 时的动作时间/ $2 \times t_{Ep}$  设定值

The action time of  $t_E$  protection = the action time / $2 \times t_{Ep}$  when  $t_{Ep}$  is 2 (S)

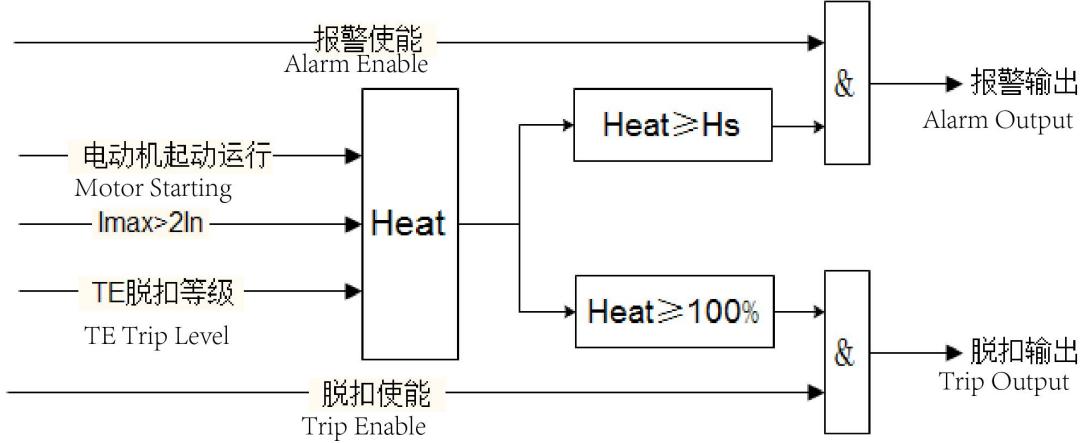

(2)、 $t_E$  设定为 5 (S) 时，按起动电流比  $IA/Ie$  确定的  $t_E$  值是按照 IEC79-7、GB3836.3-2000 标准，在用于增安型电动机  $t_E$  时间保护时，其反时限过载保护可参照该特性曲线设定。为确保电动机堵转时在  $t_E$  时间前断开电源，过载保护装置的反时限曲线宜下移 15%左右。

When  $t_E$  is set at 5 (S), the  $t_E$  value determined according to the starting current ratio  $IA/Ie$  is in accordance with IEC79-7 and GB3836.3-2000 standards. When it is used for  $t_E$  time protection of increased safety motor, its inverse time overload protection can be set according to this characteristic curve. In order to ensure that the power is disconnected before  $t_E$  time during the motor's lock-in, the inverse time curve of the overload protection device should be lowered by 15%.

about 15%.

(3)、 $t_E$  保护的动作时间是通过设定“电机类型”和“脱扣等级”来实现的，根据表 10 设定  $t_{Ep}$ （脱扣等级）来选择相应的脱扣曲线。（当电机类型选择为“增安电机”时，脱扣等级自动变为  $t_{Ep}$  设定；否则脱扣曲线是普通电机的反时限过载脱扣曲线。）

The action time of  $t_E$  protection is achieved by setting "motor type" and "trip level", and the corresponding trip curve is selected by setting  $t_{Ep}$  (trip level) according to Table 10.(When the motor type is selected as "increased security motor", the tripping level will automatically change to  $t_{Ep}$  setting;Otherwise, the trip curve is the reverse time-limit overload trip curve of ordinary motor.

注 Note:

$I_{max}$ : 三相电流最大值 Maximum three-phase current

$In$ : 额定电流 Rated current

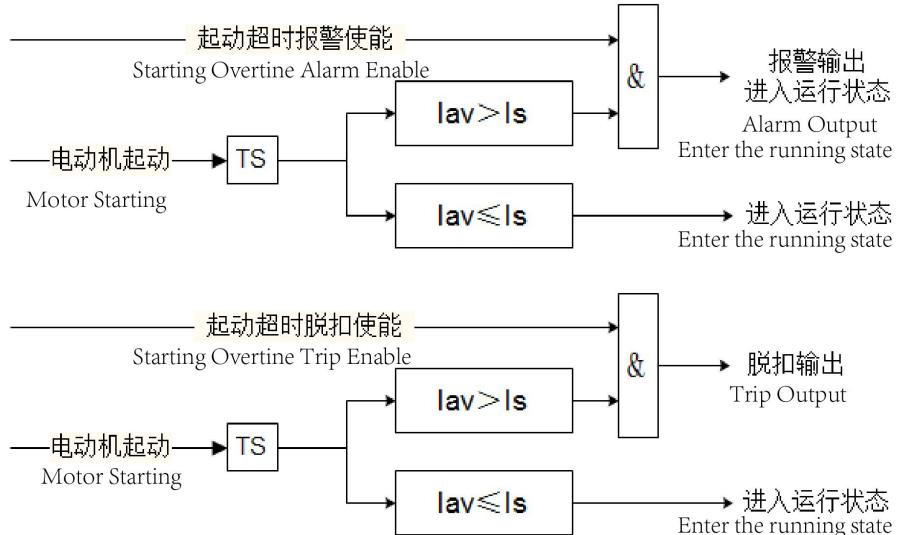

Heat: 热容量百分比 Percentage heat capacity

$H_s$ : 热容量报警值 Heat capacity alarm value

## 6.2 起动超时保护 Start timeout protection

当电动机起动时间达到用户设定的起动时间，三相平均电流未下降到设定的脱扣阈值以下，触发电起动超时保护，发出脱扣命令，停止电机运行。针对增安电机，起动时间整定不得超过 1.7 倍  $t_E$  时间。

When the starting time of the motor reaches the starting time set by the user, the average three-phase current does not drop below the set tripping threshold, trigger the starting timeout protection, issue tripping command, and stop the motor operation.For the increased safety motor, the starting time setting shall not exceed 1.7 times  $t_E$  time.

注 Note:

Iav: 三相平均电流 Three-phase mean current

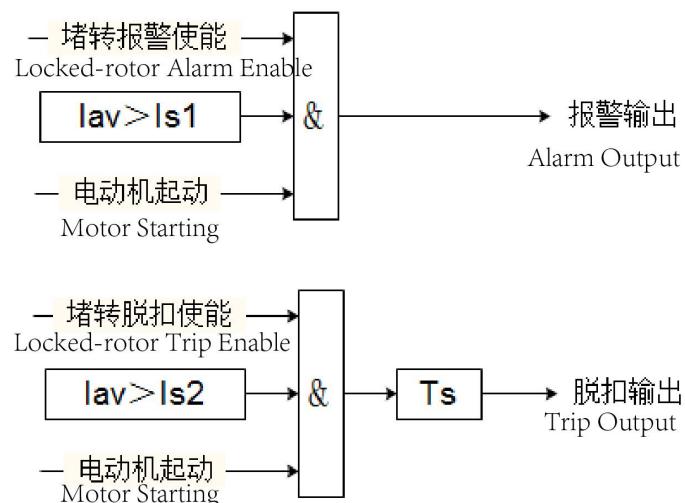

Is: 设定的脱扣阈值 Set trip threshold

TS: 起动时间 Starting time

### 6.3 堵转保护 Locked-rotor protection

电动机在起动过程中,如果由于负荷过大或自身机械原因,造成电动机轴被卡住,而未及时解除故障,将造成电机过热,绝缘降低而烧毁电机。堵转保护适用于电动机起动阶段发生此类故障时进行保护,当平均电流百分比达到设定阈值时,保护器及时在设定时间内脱扣或报警,避免电机烧毁。

In the process of starting, if the motor shaft is stuck due to excessive load or mechanical reasons, and the fault is not removed in time, the motor will overheat and the insulation will be reduced and the motor will be burned out. The locked-rotor protection is applicable to the motor when such faults occur in the starting stage. When the average current percentage reaches the set threshold, the protector will trip or alarm within the set time in time to avoid the motor burning out.

注 Note:

Iav: 三相平均电流 Three-phase mean current

Is1: 报警动作阈值 Alarm action threshold

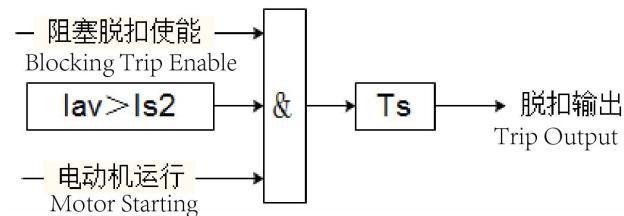

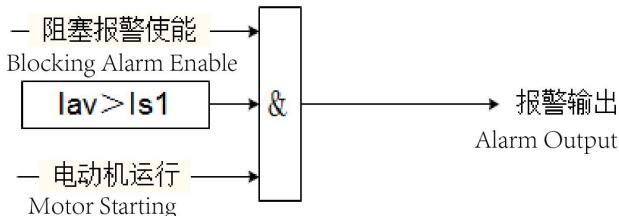

Is2: 脱扣动作阈值 Tripping threshold

Ts: 脱扣动作延时时间 Delay time of trip action

### 6.4 阻塞保护 Blocking protection

电动机在运行过程中,如果由于负荷过大或自身机械原因,造成电动机轴被卡住,而未及时解除故障,将造成电机过热,绝缘降低而烧毁电机。阻塞保护适用于电动机运行阶段发生此类故障时进行保护,当平均电流达到设定阈值时,保护器及时在设定时间内脱扣或报警,避免电机烧毁。

During the operation of the motor, if the motor shaft is stuck due to excessive load or mechanical reasons, and the fault is not removed in time, the motor will be overheated and the insulation will be reduced and the motor will be burned out. The blocking protection is applicable to protect the motor when such faults occur in the running stage. When the average current reaches the set threshold, the protector will trip or alarm within the set time in time to avoid the motor burning out.

注 Note:

Iav: 三相平均电流 Three-phase mean current

Is1: 报警动作阈值 Alarm action threshold

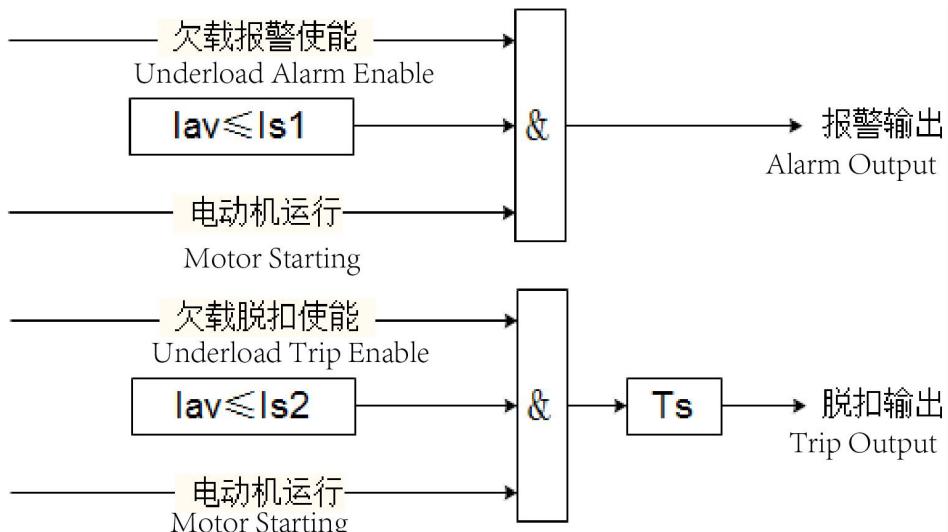

Is2: 脱扣动作阈值 Trip action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.5 欠载保护 Underload protection

当电动机所带负载为泵式负载时，电动机空载或欠载运转会产生危害，保护器提供欠载保护，当三相平均电流低于设定值时，保护器应在设定时间内脱扣或报警。

The protector provides underload protection when the motor is loaded with pumping load. When the average three-phase current is lower than the set value, the protector should trip or alarm within the set time.

注 Note:

Iav: 三相平均电流 Three-phase mean current

Is1: 报警动作阈值 Alarm action threshold

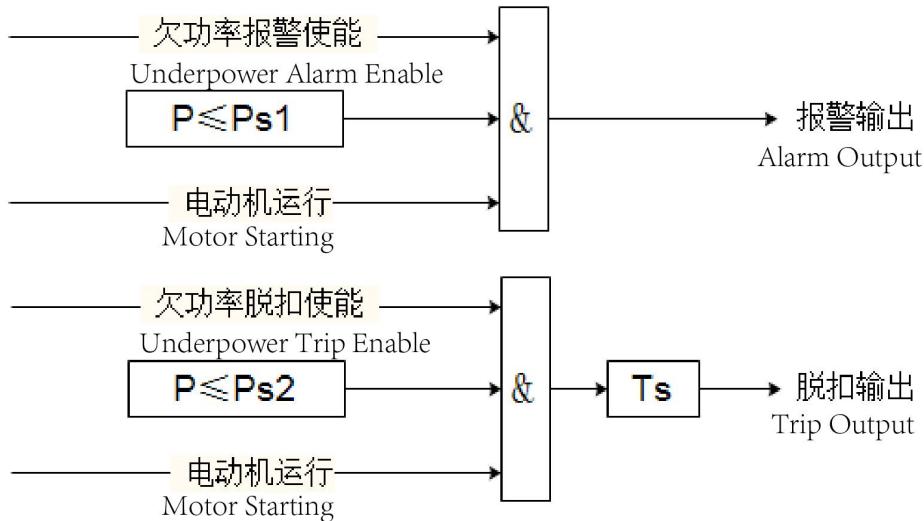

Is2: 脱扣动作阈值 Trip action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.6 欠功率保护 Underpower protection

当负载功率低于设定动作值时，保护器在动作设定时间内脱扣或报警。

When the load power is lower than the set action value, the protector will trip or alarm during the set action time.

注 Note:

P: 总有功功率 Total active power

Ps1: 报警动作阈值 Alarm action threshold

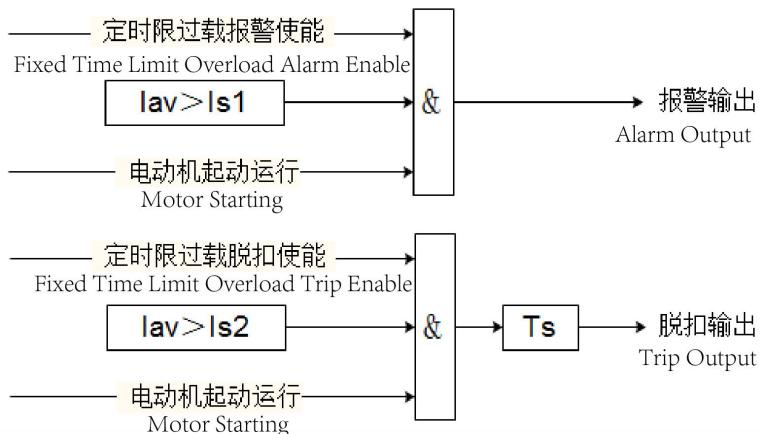

Ps2: 脱扣动作阈值 Tripping action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.7 定时限过载保护 Overload protection

除反时限过载保护外，保护器还可以提供定时限过载保护，当三相的平均电流与额定电流的百分比大于设定值时，保护器应在设定时间内脱扣或报警。

In addition to reverse Overload protection, the protector can also provide time-limit overload protection. When the percentage of three-phase average current and rated current is greater than the set value, the protector should trip or alarm within the set time.

注 Note:

Iav: 三相平均电流 Three-phase mean current

Is1: 报警动作阈值 Alarm action threshold

Is2: 脱扣动作阈值 Tripping action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.8 过功率保护 Overpower protection

当负载功率与额定功率的百分比大于设定动作值时，保护器在动作设定时间内脱扣或报警。

When the percentage of load power to rated power is greater than the set action value, the protector will trip or alarm during the set action time.

注 Note:

P: 总有功功率 Total active power

Ps1: 报警动作阈值 Alarm action threshold

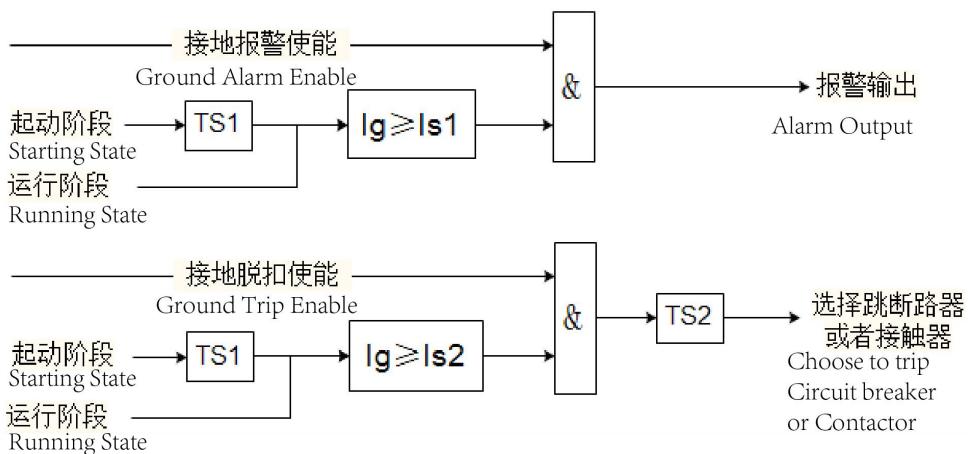

Ps2: 脱扣动作阈值 Trip action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.9 接地保护 Ground fault protection

保护器根据三相电流矢量和计算接地电流，通过接地电流进行接地保护。接地保护可以设置起动屏蔽时间，在起动屏蔽时间后，当接地电流大于设定值时在设定的时间内动作，动作逻辑可以选择跳接触器或者断路器或报警，选择跳断路器时，保护器先跳断路器，200ms 后跳接触器。

The protector is protected by the ground current according to the three-phase current vector and the calculation of the ground current. The grounding protection can set the starting shielding time. After the starting shielding time, when the grounding current is greater than the set value, the action logic can choose the breaker or breaker or alarm. When the breaker is chosen, the protector should first switch the breaker and then switch the contactor after 200ms.

注:

Ig: 接地电流 Ground current

Is1: 报警动作阈值 Alarm action threshold

Is2: 脱扣动作阈值 Tripping threshold

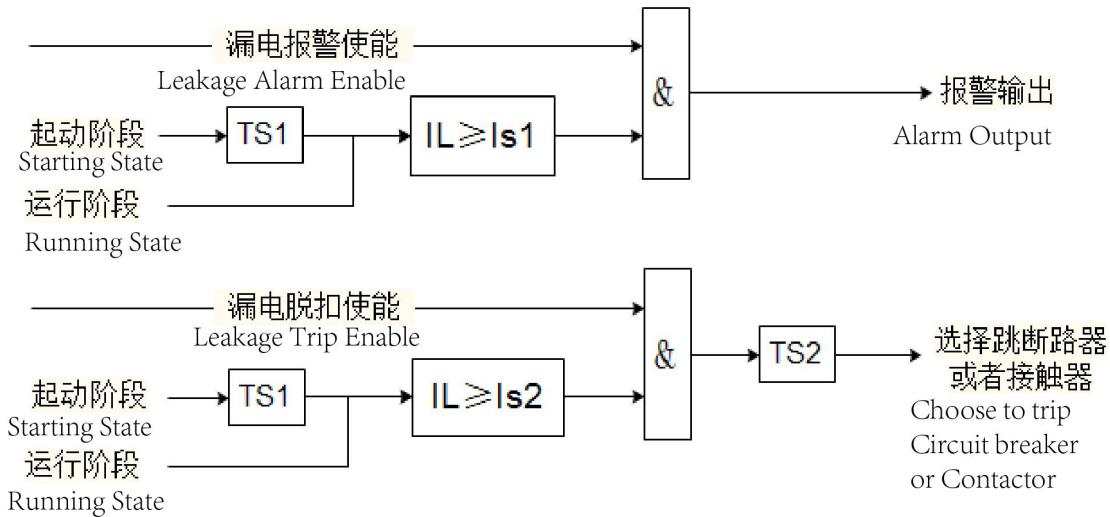

TS1: 接地起动屏蔽时间 grounding start shielding time

TS2: 脱扣动作延时时间 Delay time of trip action

## 6.10 漏电保护 Leakage protection

漏电保护需选配漏电互感器，通过零序互感器检测漏电流。漏电保护可以设置起动屏蔽时间，在起动屏蔽时间后，当漏电流大于设定值时在设定的时间内动作，动作逻辑可以选择跳接触器或者断路器或报警，选择跳断路器时，保护器先跳断路器，200ms 后跳接触器。

Leakage protection should be equipped with leakage current transformer, which can detect the leakage current through the zero-sequence transformer. The leakage protection can set the starting shielding time. After the starting shielding time, when the leakage current is greater than the set value, the operation logic can choose the breaker or contactor or alarm. When the breaker is chosen, the protector should first switch the breaker and then the contactor after 200ms.

注 Note:

IL: 漏电流 Leakage current

Is1: 报警动作阈值 Alarm action threshold

Is2: 脱扣动作阈值 Tripping threshold

TS1: 漏电起动屏蔽时间 Shield time of leakage start

TS2: 脱扣动作延时时间 Delay time of trip action

## 6.11 电流不平衡保护 I unbalance protection

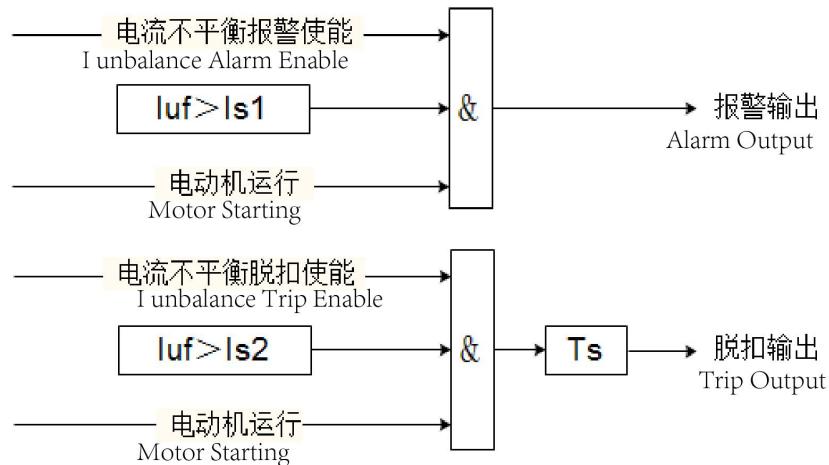

保护器计算电流不平衡度，当三相电流不平衡度大于设定值时在设定的时间内脱扣或报警。电流不平衡度的计算公式如下：

The protector calculates the current imbalance degree. When the three-phase current imbalance degree is greater than the set value, it will trip or alarm within the set time. The calculation formula of current imbalance degree is as follows:

$$I_{uf} = \left| \frac{I_{max} - I_{av}}{I_{av}} \right| \times 100\%$$

其中  $I_{uf}$  为电流不平衡度， $I_{max}$  为电流最大值， $I_{min}$  为电流最小值， $I_{av}$  为平均电流。

Where,  $I_{uf}$  is the current imbalance,  $I_{max}$  is the maximum current,  $I_{min}$  is the minimum current, and  $I_{av}$  is the average current.

注 Note:

Iuf: 电流不平衡度 Degree of current imbalance

Is1: 报警动作阈值 Alarm action threshold

Is2: 脱扣动作阈值 Tripping action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.12 电压不平衡保护 U unbalance protection

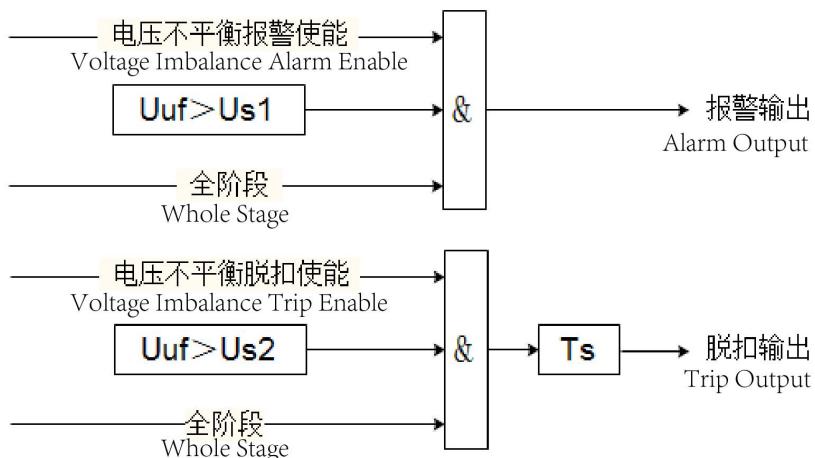

保护器计算电压不平衡度，当电压不平衡度大于设定值时在设定的时间内脱扣或报警。电压不平衡度的计算公式如下：

The protector calculates the voltage unbalance. When the voltage unbalance is greater than the set value, it will trip or alarm within the set time. The calculation formula of voltage imbalance is as follows:

$$U_{uf} = \left| \frac{U_{max(min)} - U_{av}}{U_{av}} \right| \times 100\%$$

其中  $U_{uf}$  为电压不平衡度， $U_{max}$  为线电压最大值， $U_{min}$  为线电压最小值， $U_{av}$  为平均线电压。

$U_{uf}$  is the voltage imbalance,  $U_{max}$  is the maximum line voltage,  $U_{min}$  is the minimum line voltage, and  $U_{av}$  is the average line voltage.

注 Note:

Uuf: 电压不平衡度 Voltage imbalance degree

Us1: 报警动作阈值 Alarm action threshold

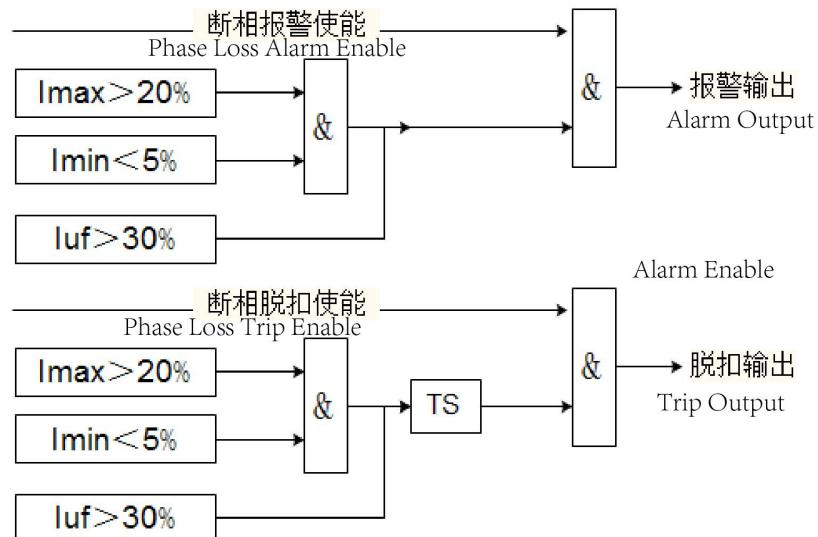

Us2: 脱扣动作阈值 Trip action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

### 6.13 断相保护 Phase fail protection

断相故障运行时对电动机的危害很大,当最大电流大于20%额定电流且最小电流小于5%额定电流时或者三相电流不平衡度大于30%时,断相保护在设定的时间内脱扣或报警。

When the phase fault runs, it will do great harm to the motor. When the maximum current is greater than 20% rated current and the minimum current is less than 5% rated current, or when the imbalance degree of three-phase current is greater than 30%, the fault protection will trip or alarm within the set time.

注 Note:

$I_{max}$ : 最大电流 Maximum current

$I_{min}$ : 最小电流 Minimum current

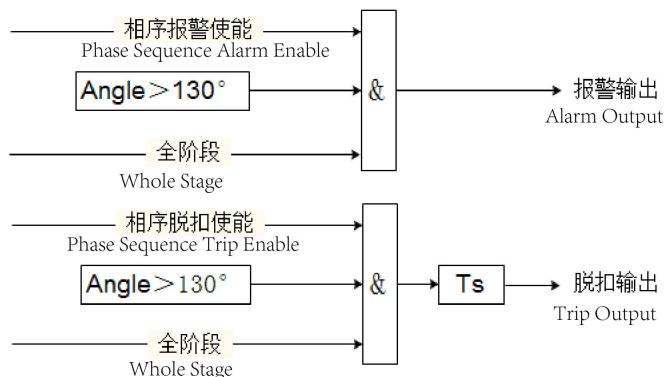

$I_{uf}$ : 电流不平衡度 Degree of current imbalance

TS: 脱扣动作延时时间 Delay time of trip action

### 6.14 相序保护 Phase sequence protection

当检测到三相电压相序错误时,保护器在设定的时间内脱扣或报警,保护电动机的安全。

When the error of three-phase voltage phase sequence is detected, the protector will trip or alarm within the set time to protect the safety of the motor.

注 Note:

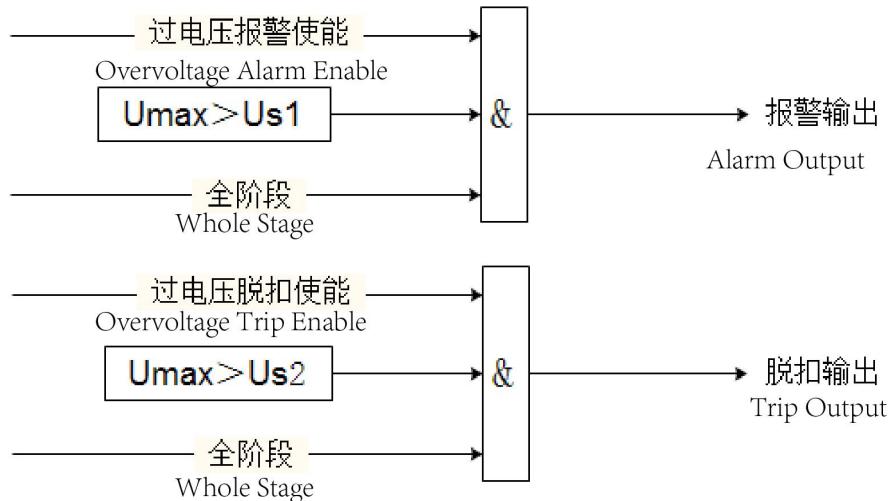

Angle: 任意两相电压的夹角 The Angle between any two - phase voltage

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.15 过电压保护 Overvoltage protection

电压过高会引起电动机绝缘程度损伤,当电动机最大线电压超过设定值时,保护器在设定时间内脱扣或报警。

Excessive voltage will cause damage to the insulation of the motor. When the maximum line voltage of the motor exceeds the set value, the protector will trip or alarm within the set time.

注 Note:

Umax: 最大线电压 Maximum line voltage

Us1: 报警动作阈值 Alarm action threshold

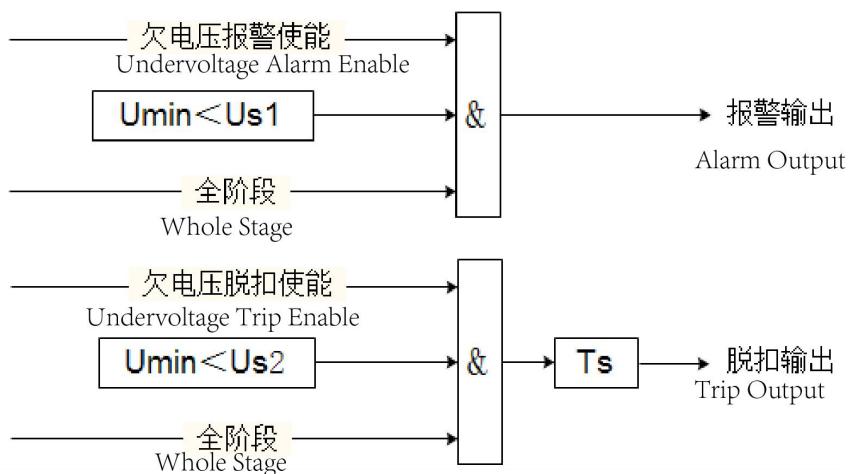

Us2: 脱扣动作阈值 Trip action threshold

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.16 欠电压保护 Undervoltage protection

电压过低会引起电动机转速降低,甚至停止运行。当电动机最小线电压低于设定值时,保护器在设定时间内脱扣或报警。

Too low voltage will cause the motor to slow down, or even stop running. When the minimum line voltage of the motor is lower than the set value, the protector will trip or alarm within the set time.

注 Note:

Umin: 最小线电压 Minimum line voltage

Us1: 报警动作阈值 Alarm action threshold

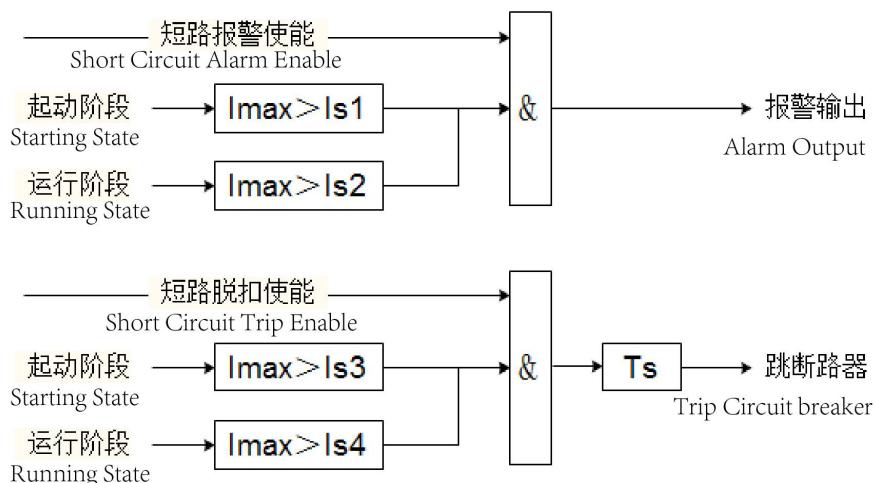

Us2: 脱扣动作阈值 Trip action threshold

Ts1: 脱扣动作延时时间 Delay time of trip action

## 6.17 短路保护 Short circuit protection

当电动机电流超过设定值时，保护器在设定时间内跳断路器或报警。短路保护分为起动和运行两个阶段，两个阶段的保护参数可独立设置。

When the motor current exceeds the set value, the protector will switch circuit breaker or alarm within the set time. The short circuit protection is divided into two stages: starting and running. The protection parameters of the two stages can be set independently.

注 Note:

Imax: 最大电流 Maximum current

Is1: 起动阶段短路报警动作阈值 Threshold of short circuit alarm during starting stage

Is2: 运行阶段短路报警动作阈值 Threshold of short circuit alarm during operation stage

Is3: 起动阶段短路脱扣动作阈值 Threshold of short-circuit trip during starting stage

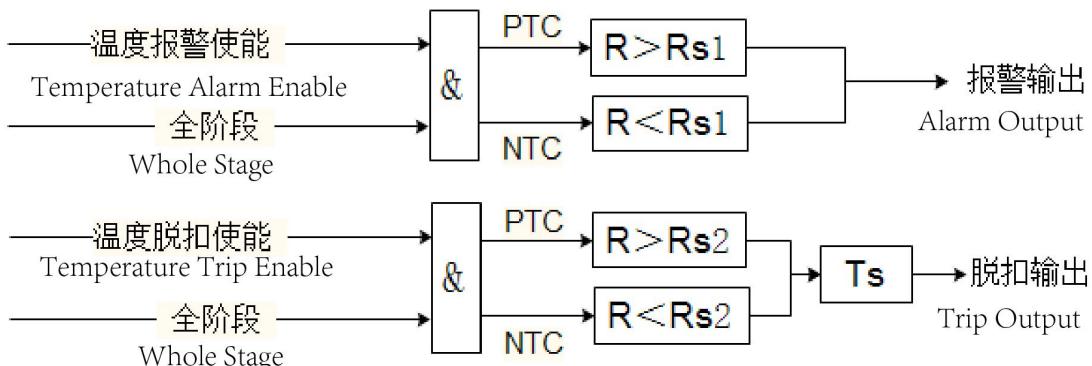

Is4: 运行阶段短路脱扣动作阈值 Threshold of short-circuit trip during operation stage

Ts: 脱扣动作延时时间 Delay time of trip action

## 6.18 温度保护 Temperature protection

温度保护是以预埋在电动机定子绕组或轴承上的热敏电阻值作为保护条件。根据选择的热敏电阻类型不同，保护逻辑不同：热敏电阻为 PTC 时，当检测的电阻值大于设定值时，保护器在设定时间内脱扣或报警；热敏电阻为 NTC 时，当检测的电阻值小于设定值时，保护器在设定时间内脱扣或报警。

Temperature protection is based on the thermistor resistance embedded in the stator windings or bearings of the motor. According to the type of thermistor selected, the protection logic is different: when the thermistor is PTC, when the detected resistance value is greater than the set value, the protector will trip or alarm within the set time; When the thermistor is NTC, when the detected resistance value is less than the set value, the protector will trip or alarm within the set time.

注 Note:

R: 检测温度阻值 Check the temperature resistance

Rs1: 报警动作温度阻值 Resistance value of alarm action temperature

Rs2: 脱扣动作温度阻值 Resistance value of tripping action temperature

Ts: 脱扣动作延时时间 Delay time of trip action

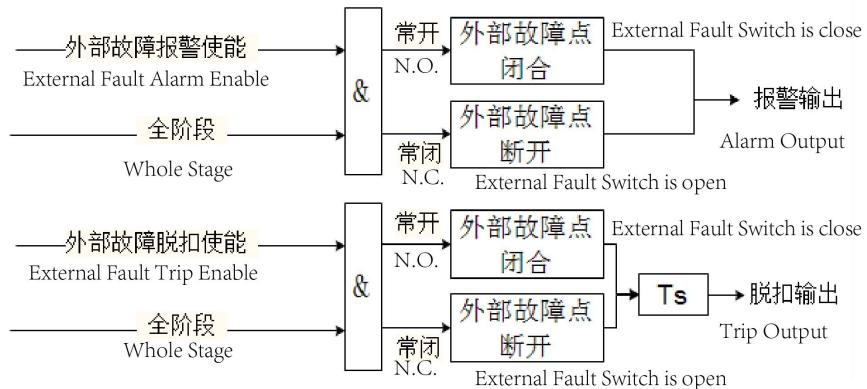

温度保护有手动或自动两种复位方式。选择“自动”时，在温度保护脱扣后，检测到电阻值小于设置的返回阻值后，保护器自动复位；选择“手动”时，在温度保护脱扣后，检测到电阻值小于设置的返回阻值后，需要人工手动复位，否则不允许再次起动。

The temperature protection can be reset manually or automatically. When "Automatic" is selected, the protector will reset automatically after the temperature protection trip when the resistance value is detected to be less than the set return resistance value. When "manual" is selected, after the temperature protection trip, if the resistance value is detected to be less than the set return resistance value, manual manual reset is required, otherwise it will not be allowed to start again.

## 6.19 外部故障 External fault

当定义为外部故障的开关量输入设置为“常开”时，闭合信号作为故障触发条件，故障信号持续时间长于设定的脱扣/报警延时时间后，产生脱扣/报警；当定义为外部故障的开关量输入设置为“常闭时”，断开信号作为故障触发条件，故障信号持续时间长于设定的脱扣/报警延时时间后，产生脱扣/报警。

When the input of switch quantity defined as external fault is set as "normally on", the closing signal is taken as the trigger condition of the fault. When the duration of the fault signal is longer than the set tripping/alarm delay time, tripping/alarm will be generated. When the input of switch quantity defined as external fault is set as "normally closed", the disconnect signal is used as the trigger condition of the fault. When the duration of the fault signal is longer than the set trip/alarm delay time, trip/alarm will be generated.

注 Note:

Ts: 脱扣动作延时时间 Delay time of trip action

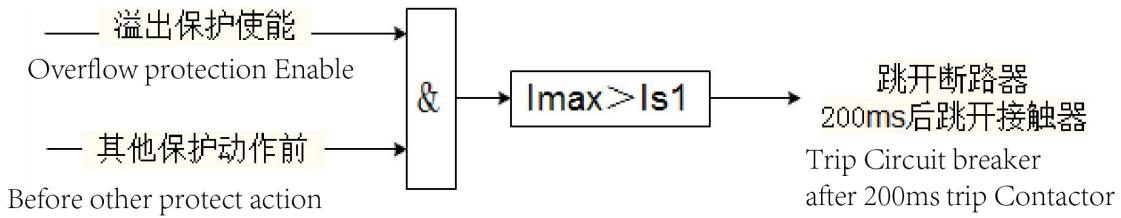

## 6.20 溢出保护 Overflow protection

发生故障时电流超过接触器的分断电流，强行断开接触器会损坏接触器。此时应先分断断路器，切除故障电流后再断开接触器。

When the fault occurs, the current exceeds the breaking current of the contactor, and the contactor will be damaged if the contactor is forcibly disconnected. At this point, the breaker should be broken first, and then disconnect the contactor after the fault current is removed.

保护器在产生其它脱扣故障动作前，如果故障电流大于设定的溢出电流，则先跳开断路器，200ms 后再跳开接触器。

If the fault current of the protector is greater than the set overflow current before any other tripping fault action, the breaker should be first switched on, and then the contactor should be switched off after 200ms.

注 Note:

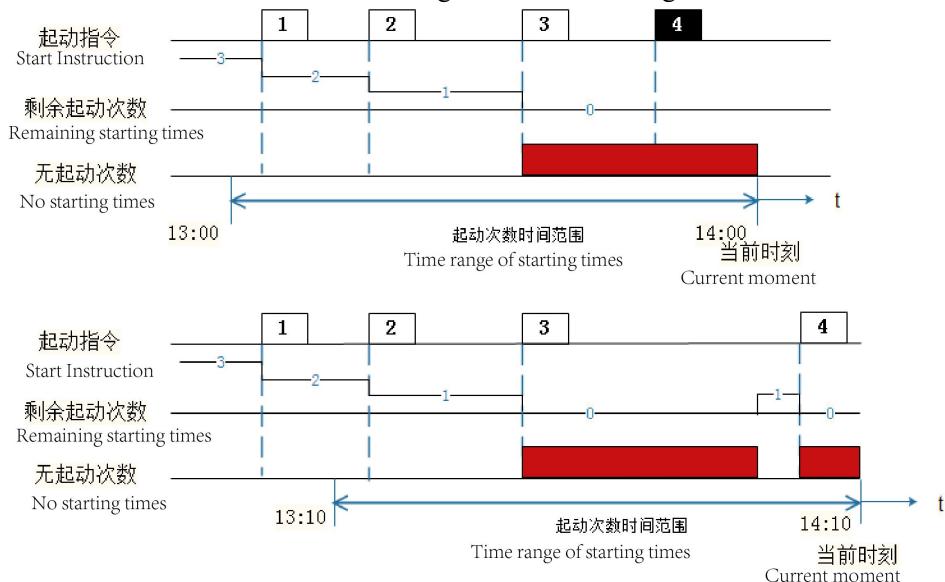

$I_{max}$ : 最大电流 Maximum current

$I_{s1}$ : 溢出电流 Overflow current

## 6.21 起动次数保护 Number of starts protection

短时间内频繁启停电动机容易造成电动机损坏。当电动机在设置的时间内剩余起动次数为 0 时，保护器发出报警信号，此时若再发出起动命令，则保护器脱扣，需等待冷却时间后允许再次起动。

The motor is easy to be damaged due to frequent starting and cutting in a short time. When the remaining starting number of the motor is 0 within the set time, the protector sends an alarm signal. If the starting command is issued again at this time, the protector will release and allow to start again after the cooling time.

### 示例 Example:

设置 1 小时时限范围内允许起动 3 次。Set the time limit of 1 hour to allow 3 starts.

上图：13:00-14:00 期间已经起动 3 次，第 4 次时无起动次数，所以第 4 次起动失败。

Figure above: It has been started for 3 times between 13:00 and 14:00, and there is no number of starts at the fourth time, so the fourth time fails.

下图：第 4 次起动前，剩余起动次数恢复至 1 次，所以第 4 次起动成功。

Figure below: Before the fourth start, the remaining number of starts is restored to 1, so the fourth start is successful.

## 6.22 运行时间报警 Running time alarm

当电动机累计运行时间超过设定值时，保护器发出报警信号，提醒工作人员检修维护电动机。

When the accumulated running time of the motor exceeds the set value, the protector will send an alarm signal to remind the staff to overhaul and maintain the motor.

## 6.23 故障次数报警 Fault frequency alarm

当保护器累计脱扣保护次数超过设定值时，保护器发出报警信号。

When the cumulative number of protection trips exceeds the set value, the protector will send an alarm signal.

## 7、功能设置与说明 Display module introduction

7.1 显示模块按键、LED 指示灯说明见表 11:

The display module and LED indicator light are shown in Table11:

表 11 Table 11

序号 Serial No.	名称 Name	状态 State	功能说明 Function Description
1	起动 1 按键 Start 1 button	按下 Press	手动模式、两部模式、双速模式、星三角时操作起动 1 继电器 Manual mode, two-part mode, two-speed mode, star triangle operation start 1 relay
2	起动 2 按键 Start 2 button	按下 Press	手动模式、双速模式时操作起动 2 继电器 Operate and start the 2 relay in manual mode and two-speed mode
3	停车按键 Stop button	按下 Press	释放起动继电器 Release starting relay
4	复位按键 Reset button	按下 Press	故障状态时使用, 复归故障 Use in fault state and restore the fault
5	取消按键 Cancel button	按下 Press	退出菜单; 取消操作 Exit menu; Cancel the operation
6	左方向键 Left keys	按下 Press	上翻菜单; 修改数据时数据移位 Upside-down menu; Data is shifted when data is modified
7	右方向键 Right key	按下 Press	下翻菜单; 修改数据 Scroll down menu; Modify the data
8	确认按键 Confirm button	按下 Press	进入设置菜单、写入修改后的数据 Enter the Settings menu and write the modified data
9	就绪 LED 指示灯 Ready LED indicator	亮 Bright	该指示灯亮表示保护器处于正常状态, 可以起动电动机 The indicator light is always on to indicate that the motor is ready to start

## 7.2 显示模块简介 Display module introduction

### 7.2.1 数据显示界面 Data display interface

保护器上电后进入数据显示界面，在此界面下按“”、“”键可以进行电流、电压、DI/DO 状态等信息的翻页查看，具体显示内容如图 12（下图为停车状态下的显示数值）：

After the protector is powered on, it enters the data display interface. Press " " and " " to scroll through the current, voltage, DI/DO state and other information. The specific display content is shown in Figure 16 (the figure below shows the display value in the stopped state)

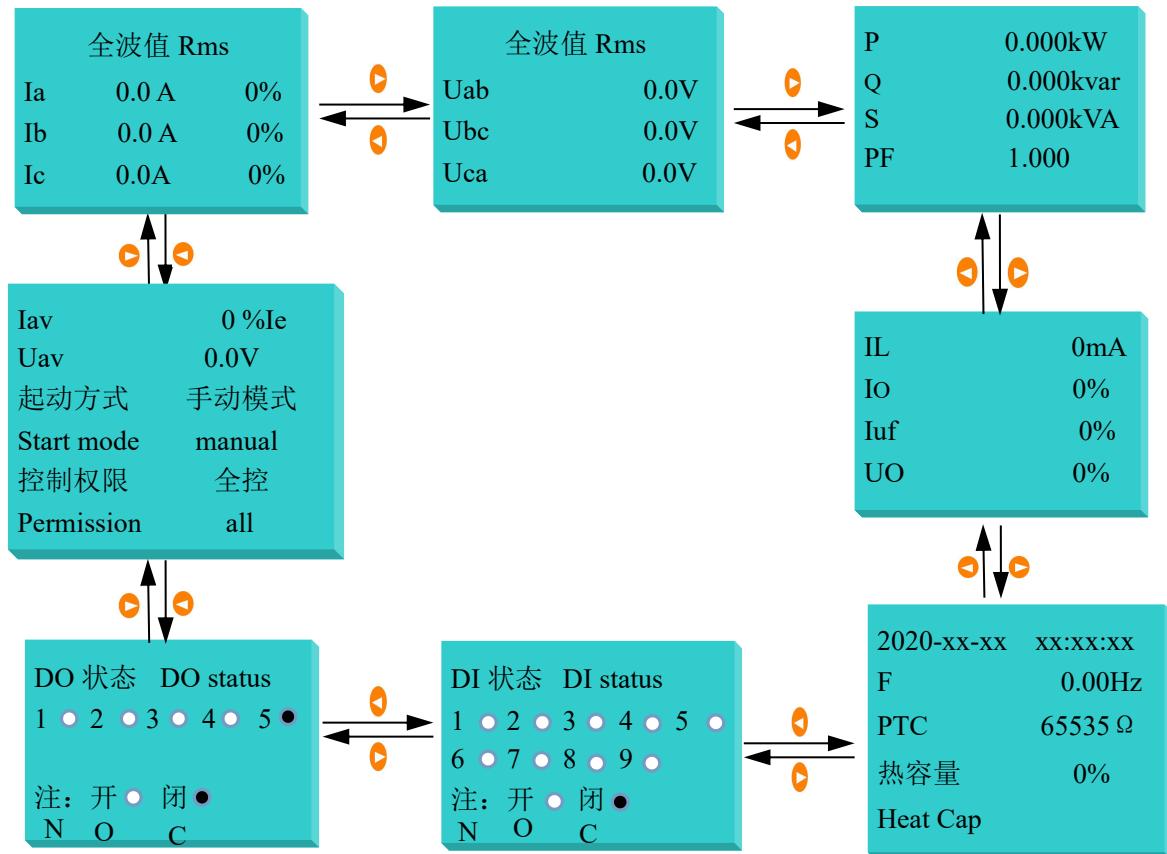

图 12 数据显示界面

Figure 12 Data display interface

### 7.2.2 参数查看与设置 Parameter viewing and setting

需要查看或设置某项参数时，首先按“确认”键进入密码界面，输入正确密码（默认 0001）后进入主菜单。按方向键移动光标至对应选项，按“确认”键进入，选择对应子菜单进行查看或修改。图 13 以修改控制权限作为操作示例：

When you need to view or set a parameter, first press "OK" to enter the password interface and enter the correct password (default 0001) before entering the main menu. Press the arrow key to move the cursor to the corresponding option, press the "OK" key to enter, and select the corresponding sub-menu for viewing or modification. Figure 13 shows an example of how to modify the control authority:

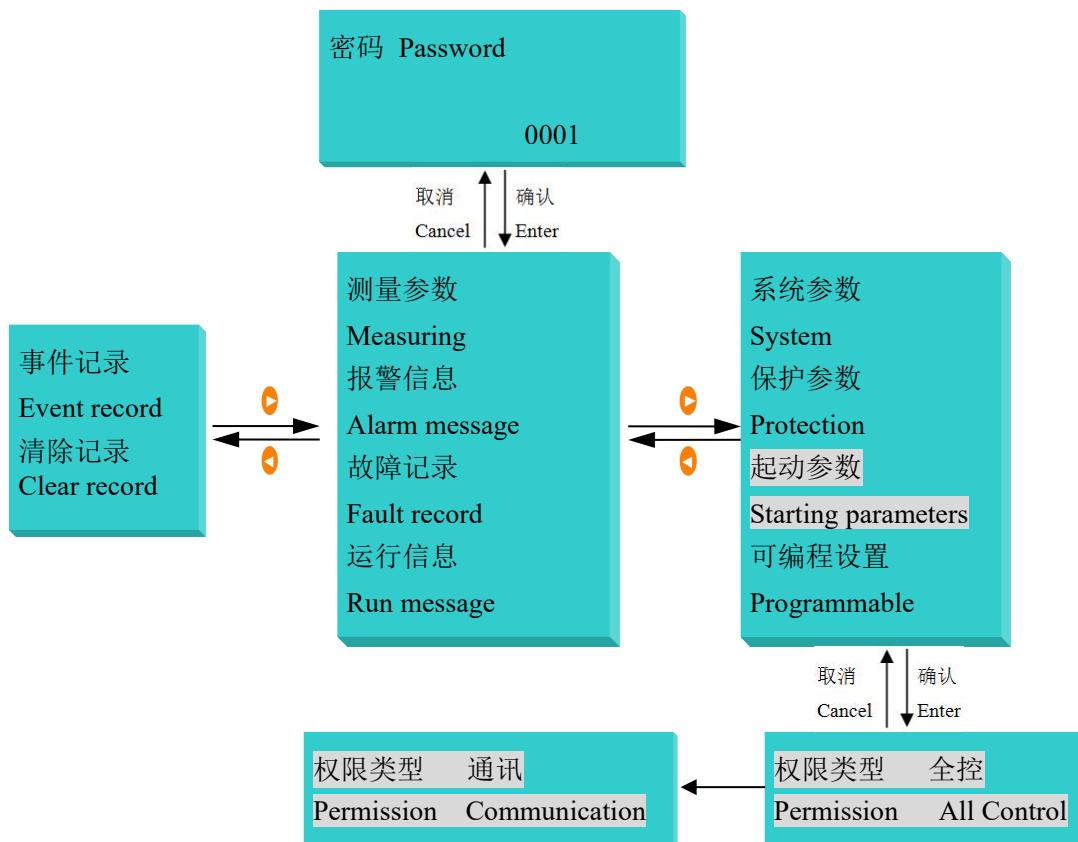

图 13 修改控制权限操作示意

Figure 13 Shows the operation diagram of Ethernet communication parameters

### 7.3 菜单介绍说明 Menu description

ARD2M 菜单介绍见表 12:

See Table 12 for the ARD2M menu:

表 12 Table 12

序号 Serial No.	主菜单 Main manu	功能 Function	类别 Type	设定范围 Setting Rang	默认值 Default value	单位 Unit
I	测量参数 Measured parameters	基波电流 Fundamental wave current	—	—	—	A
		有效值电流 Effective current	—	—	—	A
		基波电压 Fundamental wave voltage	—	—	—	V

		有效值电压 RMS voltage	—	—	—	V
		电压相位相角 Voltage phase Angle	—	—	—	
		其他电参量 Other electrical parameters	—	—	—	
二 II	报警信息 Alarm information	—	—	—	—	
三 III	故障记录 Fault record	—	—	—	—	
四 IV	运行信息 Running information	本次运行时间 Running time of this time	—	—	—	h
		本次停车时间 Stop time of this time	—	—	—	h
		总运行时间 Total running time	—	—	—	h
		总停车时间 Total stop time	—	—	—	h
		起动次数 Start qty	—	—	—	
		脱扣次数 Trip qty	—	—	—	
		最大起动电流 Maximum start current	—	—	—	A
		最大运行电流 Maximum running current	—	—	—	A
五 V	系统参数 System parameters	额定电流 Rated current	—	0.1-1.6	1	A
				1.6-6.3	5	
				6.3~25	25	
				25~100	100	
				63~250	250	
				250~800	800	
		额定电压 Rated voltage	—	57-1200V	380	V
				0.12-999kW	—	
				45-70	50	
				普通电机、增安电机 Common motor, increased safety motor	普通电机 Common motor,	
		高速电机设置 High speed motor setting	额定电流 Rated current	0.1-1.6	1	
				1.6-6.3	5	
				6.3~25	25	
				25~100	100	
				63~250	250	
				250~800	800	

		额定功率 rated power	0.12-999kW	—	
	接线方式 Connection mode	—	1P2L、3P3L、3P4L	3P4L	
	CT 变比 CT ratio	—	1A 规格 spec: 1-5000 5A 规格 spec: 1-1000	1	
	保护选择 Protection selection	—	基波值、全波值 Fundamental wave value, full wave value	基波值 Fundamental wave value	
通讯设置 Modbus RTU setting	地址 1 ADD 1	1-247	1		
	波特率 1 Baud rate1	1200、2400、4800、 9600、19200、38400	9600	bps	
	校验位 1 Check digit 1	None/2stop/Odd/Even	None

## 8、通讯设置与说明 Communication Settings and instructions

### 8.1 Modbus RTU 通信协议概述 Modbus RTU Communication Protocol Overview

电气接口: RS485 半双工

波特率: 1200/2400/4800/9600/19200/38400

地址: 由一个字节组成 (8 位二进制), 十进制为 0~255, 系统中只使用 1~247, 其它保留

错误检测: CRC

Electrical interface: RS485 half duplex

Baud: 1200/2400/4800/9600/19200/38400

Address: Consists of one byte (8-bit binary), 0 to 255 in decimal, only 1 to 247 in the system, the rest reserved

Error detection:CRC

数据格式 Data format:

地址码 Address code	功能码 Function code	数据区 Data area	CRC 校验 CRC check
---------------------	----------------------	------------------	---------------------

数据长度 Data length:

1 个字节	1 个字节	N 字节	2 个字节
-------	-------	------	-------

1 byte	1 byte	N bytes	2 bytes
--------	--------	---------	---------

每字节位：1位起始位、8位数据位（最小有效位先发送）、无奇偶校验、1位停止位

ARD2M 支持的 MODBUS 功能码：

Each byte bit: 1 bit start, 8 bit data (least significant bit sent first), no parity, 1 bit stop

MODBUS function code supported by ARD2M:

01(0x01)功能码: 读线圈状态 (继电器输出 DO, 地址 0 对应 DO1)

02(0x02)功能码: 读开关量输入状态 (DI, 地址 0 对应 DI1)

03/04(0x03、0x04)功能码: 读保持寄存器

05(0x05)功能码: 写线圈状态 (控制继电器输出 DO, 地址 0 对应 DO1)

06(0x06)功能码: 写单个寄存器

16(0x10)功能码: 写多个寄存器

01 (0x01) Function code: Read coil state (relay output DO, address 0 corresponds to DO1)

02 (0x02) Function code: Read switch input state (DI, address 0 corresponds to DI1)

03/04 (0x03, 0x04) Function code: read hold register

05 (0x05) Function code: write coil state (control relay output DO, address 0 corresponds to DO1)

06 (0x06) Function code: Write a single register

16 (0x10) function code: Write multiple registers

注 Note: 运行控制位、输出控制位使用 16 功能码写入。

The operation control bit and output control bit are written in 16 function codes.

通讯应用 Communications applications

本节所举实例尽可能采用下表格式 (数据为 16 进制)

The examples in this section use the following tabular format (in hexadecimal data) whenever possible

Addr	Fun	Data start		Data		CRC16	
		reg Hi	reg Lo	reg Hi	reg Lo	Lo	Hi
01H	03H	00H	00H	00H	06H	C5H	C8H
地址 Add	功能码 Function code	数据起始地址 Data starting address		数据读取个数 Data read qty		循环冗余校验码 Cyclic redundancy check code	

读数据 Read the data

例 1: 使用 01 功能读寄存器: 读取 01 号 ARD2M 保护器的 DO1-DO5 继电器输出状态

Example 1: Read register using the 01 function: read the OUTPUT status of DO1-DO5 relay of the 01 ARD2M protector

查询数据帧 Check data frame	01 01 00 00 00 05 FC 09
返回数据帧 Return data frame	01 01 01 10 50 44

例 2: 使用 02 功能读寄存器: 读取 01 号 ARD2M 保护器的 DI1-DI5 开关量输入状态

Example 2: Register read using the 02 function: read the di1-DI5 switch input status of the 01 ARD2M protector

查询数据帧 Check data frame	01 02 00 00 00 05 B8 09
---------------------------	-------------------------

返回数据帧 Return data frame	01 02 01 10 A0 44
----------------------------	-------------------

例 3: 使用 03 或 04 功能读寄存器: 读取 01 号 ARD2M, 从地址 400 开始读 3 个数据

Example 3: Register read using the 03 or 04 function: read 01 ARD2M and read 3 data from address 400

查询数据帧 Check data frame	01 03 01 90 00 03 04 1A
返回数据帧 Return data frame	01 03 06 00 00 00 00 00 00 OE D1

写数据 Write the data

例 4: 使用 05 功能写寄存器

Example 4: Use the 05 function to write registers

闭合 01 号 ARD2M 的 DO1 继电器:

Close DO1 relay no. 01 ARD2M:

查询数据帧 Check data frame	01 05 00 00 FF 00 8C 3A
返回数据帧 Return data frame	01 05 00 00 FF 00 8C 3A

断开 01 号 ARD2M 的 DO1 继电器:

Disconnect DO1 relay of No. 01 ARD2M:

查询数据帧 Check data frame	01 05 00 00 00 00 CD CA
返回数据帧 Return data frame	01 05 00 00 00 00 CD CA

例 5: 使用 06 功能写寄存器: 将 01 号 ARD2M 的 DO2 输出。开关量输入/输出状态的指示寄存器地址为 022DH, 第 022DH -9 位对应 DI1-10, 第 10 位对应 DO6, 第 11-15 位对应 DO1-5。

Example 5: Write register using 06 function: output DO2 of 01 ARD3M. The indicating register address of switch input/output state is 022DH, bit 022DH-9 corresponds to Di1-10, bit 10 corresponds to DO6, and bit 11-15 corresponds to DO1-5.

查询数据帧 Check data frame	01 06 02 2D 10 00 15 BB
返回数据帧 Return data frame	01 06 02 2D 10 00 15 BB

例 6: 使用 16 功能写寄存器: 将 01 号 ARD2M 的 DO2 输出。开关量输入/输出状态的指示寄存器地址为 022DH, 第 022DH -9 位对应 DI1-10, 第 10 位对应 DO6, 第 11-15 位对应 DO1-5。

Example 6: Write register with 16 function: output DO2 of 01 ARD2M. The indicating register address of switch input/output state is 022DH, bit 022DH-9 corresponds to Di1-10, bit 10 corresponds to DO6, and bit 11-15 corresponds to DO1-5.

查询数据帧 Check data frame	01 10 02 2D 00 01 02 10 00 8E 2D
返回数据帧 Return data frame	01 10 02 2D 00 01 90 78

ARD2M 详细 MODBUS 通讯地址见表 13

The detailed MODBUS address of ARD2M is shown in table 13

表 13 Table 13

分类 Classification	地址 Add.	参数 Parameter	读写属性 Read write attribute	取值范围 Value range	类型 Type
实时参数 Measure parameters	400	A 相有效值电流百分比 A Phase effective value current percentage	R	0-1200%	word
	401	B 相有效值电流百分比 B Phase effective value current percentage	R		word
	402	C 相有效值电流百分比 C Phase effective value current percentage	R		word
	403	平均有效值电流百分比 Average effective value current percentage	R		word
	404	最大有效值电流百分比 Maximum RMS current Percentage	R		word
	405	A 相基波电流百分比 A Phase fundamental current percentage	R		word
	406	B 相基波电流百分比 B Phase fundamental current percentage	R		word
	407	C 相基波电流百分比 C Phase fundamental current percentage	R		word
	408	平均基波电流百分比 Average fundamental current percentage	R		word
	409	最大基波电流百分比 Maximum fundamental current percentage	R		word
	410	接地电流百分比 Ground current percent	R		word
	411	正序电流百分比 positive sequence current percentage	R		word
	412	负序电流百分比 Negative sequence current percentage	R		word
	413	A 相基波电流 A Phase fundamental current	R	0-65535/电流比例因子为实际值 0-65535/Current scaling factor is the actual value	word
	414	B 相基波电流 B Phase fundamental current	R		word
	415	C 相基波电流 C Phase fundamental current	R		word
	416	Uab 基波线电压 Uab Fundamental line voltage	R	0~1999.9V	word

417	Ubc 基波线电压 Ubc Fundamental line voltage	R	0~1999.9V	word
418	Uca 基波线电压 Uca Fundamental line voltage	R	0~1999.9V	
419	漏电电流 leakage current	R	30-3000mA	
420	A 相有效值电流 A Phase effective current	R	0-65535/电流比例因子为实际值 0-65535/current scaling factor is the actual value	word
421	B 相有效值电流 B Phase effective current	R		word
422	C 相有效值电流 C Phase effective current	R		word
423	Uab 有效值线电压 Uab RMS line voltage	R	0~1999.9V	word
424	Ubc 有效值线电压 Ubc RMS line voltage	R	0~1999.9V	word
425	Uca 有效值线电压 Uca RMS line voltage	R	0~1999.9V	word
426	频率 frequency	R	15.00-75.00Hz	word
427	电流不平衡度 Degree of current imbalance	R	0-100%	
428	累计热容量百分比 Percentage of cumulative heat capacity	R	0-100%	word
429	温度阻值 Temperature resistance	R	0-65535Ω	word
430	零序电压百分比 Zero sequence voltage percent	R	0-999%	高字节 word High byte word
431	正序电压百分比 Percentage of positive sequence voltage	R	0-999%	低字节 word Low byte word
432	负序电压百分比 Percentage of Negative sequence voltage	R	0-999%	符号短整型 signed short int
433	电压不平衡 Voltage imbalance	R	0-999%	
434	AB 相电压相角差 AB Phase voltage phase Angle difference	R	0-359.9°	word
435	BC 相电压相角差 BC Phase voltage phase Angle difference	R	0-359.9°	
436	CA 相电压相角差	R	0-359.9°	

		CA Phase voltage phase Angle difference			
437-439		保留 Retain	R		
440	基波总有功功率 fundamental wave Total active power	R	32位有符号数， 高字在前，低字在后 单位 W 32 bit signed number, High byte before, low byte after Unit:W	高字 word High byte word	低字 word Low byte word

## 9、特色功能简介 Features and Functions

### 9.1 权限可编程 Permissions programmable

保护器具有完善的控制权限可编程功能，配合权限为“二选一”或“三选一”时使用。

Protector has perfect control authority programmable function, with permission for "1 in 2" or "1 in 3" use.

当控制权限为“二选一”时，用户可将控制权限输出 1 与输出 2 定义：显示单元、通讯就地、远程和停车中的任一种（两者定义不可重复）。

When the control permission is "1 in 2" , the user can define the control permission output 1 and output 2: either of

the panel, communication, remote and native (both definitions are not repeatable).

例如：控制权限定义为“二选一”，控制权限输出类型输出 1 定义为“通讯控制”，输出 2 定义为“就地控制”。DI6 定义为（控制权限 1），DI6（控制权限 1）断开时，控制权限输出 1 对应的控制方式生效；DI6（控制权限 1）接通时，输出 2 对应的控制方式生效。则控制权限选择如下表 14 所示：

For example, control permissions are defined as "1 in 2 ", control permission output type output 1 is defined as "communication control ", output 2 is defined as "panel control ". The DI6 is defined as (control permission 1). When DI6( control permission 1) is disconnected, the control mode corresponding to the control permission output 1 takes effect, and the control mode corresponding to the output 2 takes effect when the DI6( control permission 1) is connected. The control permissions are selected as shown in Table 14 below:

表 14 Table 14

控制权限输出类型 Control Permission Type	DI6 控制权限 1 输入状态 DI6 Control Permission Input 1 State
输出 1-通讯控制 Output 1-Communication control	0
输出 2-就地控制 Output 2-Panel control	1

当控制权限设置为“三选一”时，用户可将控制权限输出 1、输出 2、输出 3 和输出 4 分别定义为显示单元、通讯就地、远程和停车中的任一种（各输出定义不可重复），并通过 DI6（控制权限 1）、DI7（控制权限 2）的通断来选择生效的输出。若控制权限输出 1 定义为“通讯”控制，输出 2 定义为“就地”控制，输出 3 定义为“显示单元”控制，输出 4 定义为“远程”控制，则控制权限选择如下表 15 所示：

When the control permissions are set to "1 in 3", The user can define control rights output 1, output 2, output 3, and output 4 as either of the panel, communication, remote, and native, stop (each output definition is not repeatable), The effective output is selected by DI6( control permission 1), DI7( control permission 2) on-off. If control permission output 1 is defined as communication control, Output 2 is defined as panel control, Output 3 is defined as native control, Output 4 is defined as remote control, The control permissions are selected as shown in Table 15 below:

表 15 Table 15

控制权限 Control permissions	DI 输入状态 DI Input state	
	DI6 控制权限 1 DI6 Control permission 1	DI7 控制权限 2 DI7 Control permission 2
通讯控制 Communication control	0	0
就地控制 Panel control	0	1
显示单元控制 Native control	1	0
远程控制 Remote control	1	1

注：“0”表示开关量输入断开，“1”表示接通。

Note:"0" means switch input disconnected,"1" means turn on.

## 9.2 逻辑可编程 Logic programmable

保护器具有完善的逻辑可编程功能，用户可根据所需的逻辑输出功能进行编程定义。每路逻辑功能，由 5 项可编程的输入条件 A、B、C、D、E，通过“与”、“或”关系自由组合而成，每项输入条件的可编程内容以及输入条件的组合方式可参见表 12 菜单。

The protector has perfect logic programmable function, and the user can program and define according to the required logic output function. Each logic function consists of five programmable input conditions A、B、C、D、E, freely combined by "with "," or" relations. The programmable content of each input condition and the combination of input conditions can be seen in Table 12 menu.

例：假设用户需要在阻塞、短路、定时限过载、断相、电流不平衡中任一故障发生时输出无源信号，可将

DO3（也可用其它 DO）设置为逻辑图输出 1，将逻辑输出 1 的条件设置为 A\*B\*C\*D\*E，同时将条件输入 A、B、C、D、E 分别设置为阻塞、短路、定时限过载、断相、电流不平衡故障，则阻塞、短路、定时限过载、断相、电流不平衡故障任一故障发生时，DO3——逻辑图输出 1 动作，输出无源信号。

Suppose the user needs to output passive signal when any fault occurs in blocking, short circuit, time limit overload, phase break, current imbalance, can set DO3(or other DO) to logic diagram output 1, set the condition of logic output 1 to A\*B\*C\*D\*E, and set the condition input A、B、C、D、E to block, short circuit, time limit overload, phase break, current imbalance fault, then block, short circuit, time limit overload, phase break, current imbalance fault any fault occurs, DO3—— logic diagram output 1 action, output passive signal.

注：“+”表示与逻辑，“\*”表示或逻辑。

Note : "+" representation and logic, "\*" representation or logic.

### 9.3 自定义通讯地址 Custom communication address

保护器具有通讯地址自定义功能，使通讯读取更加便捷、有效。

The protector has the function of customizing communication address, which makes communication reading more convenient and effective.

有 120 个通讯地址可供用户自定义使用。地址 5000-5119 和 5300-5419，对应的数据值可自定义使用。如将 5300 的值写为 2010，则表示地址 5000 与地址 2010 数据相同相同。

There are 120 communication addresses for user customization. Address 5000-5119 and 5300-5419, the corresponding data values can be customized. If the value of 5300 is written as 2010, the address 5000 is the same as the address 2010 data.

例：假设用户需要频繁读写原地址 2003、2300、2307、2309、2335、2357、2758、2800。这几个地址不是连续地址，每读一个地址数据，需要发送一次 MODBUS 读命令。

Example: Suppose the user needs to read and write the original address 2003,2300,2307,2309,2335,2357,2758,2800 frequently. These addresses are not continuous addresses, each read an address data, need to send a MODBUS read command.

这种情况下可通过自定义通讯地址功能提高效率：用户可以将地址 5300-5307 分别写为 2003、2300、2307、2309、2335、2357、2758、2800，这样地址 5000-5007 的定义、读写属性、取值范围等将与上述地址一一对应。此时用户只需发送一次读命令，实现全部数据读写。

In this case, the efficiency can be improved by customizing the address function: the user can write the address 5300-5307 as 2003,2300,2307,2309,2335,2357,2758,2800 respectively, so that the definition of the address 5000-5007, read and write, value range and so on will correspond to the above address one by one. At this time, the user only needs to send a read command to achieve all data read and write.

## 10、订货范例 Examples of ordering

例 1：具体型号：ARD2M-100/CP

技术要求：电动机功率 37KW

通讯协议：MODBUS RTU 协议；PROFIBUS 协议

辅助电源：AC 220V

Example1: specific model: ARD2M-100/CP

Technical requirements: motor power37KW

Communication protocol:MODBUS RTU protocol; PROFIBUS protocol

Auxiliary power:AC 220V

例 2：具体型号：ARD2M-100/CC

技术要求：电动机功率 37KW

通讯协议：2 路 MODBUS RTU 协议

辅助电源: AC 220V

Example2: specific model: ARD2M-100/CC

Technical requirements: motor power37KW

Communication protocol:2 channels MODBUS RTU protocol

Auxiliary power:AC 220V
